

DIRECTIONS *for questions 1 to 4:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

The U.S. is one of the few nations on earth where private, for-profit business formation is seen as a quasi-heroic act. The resulting entrepreneurial culture has captured the world’s imagination and driven the nation to great prosperity. Yet now it is clearly faltering.

In a new paper that’s already generated much discussion, economists Ian Hathaway of Ennsyte Economics and Robert Litan of the Brookings Institution document four decades of “Declining Business Dynamism in the United States.” Looking at data [from across the U.S.], Hathaway and Litan conclude there’s been a secular decline in business formation throughout the country, with a concurrent increase in business dissolution. The rate of business formation in 2019 was almost half of what it was in 1978, with the rate of dissolution somewhat higher than the past couple decades. When they restate this another way, the implications are clearer: “Whatever the reason, older and larger businesses are doing better relative to younger and smaller ones.” Deep, disruptive economic change is all around us, but the data indicates that the national response has not been, contrary to our myths and history, one of increased entrepreneurship.

Hathaway and Litan stay close to the data in this work and stop short of speculating about causes of this trend. So allow me. While there are numerous factors in such a massive shift away from business formation, one of the most powerful has to be the consolidation of multiple economic sectors toward a handful of firms with hegemonic power over their industry. Much of this is driven by the needs of the financial sector, which itself has consolidated massively [and this] has led to similar dynamics in other industries. In pharmaceuticals, the largest company, Pfizer, is the result of decades of mergers...In chemicals, energy, technology, beer and more, you can see a multi-decade trend toward the consolidation of behemoths...

How does this consolidation impact entrepreneurs? Giant firms seek the services of similarly large vendors. New, small entrants into the market will be at pains to form relationships with such firms, and the power imbalance is effectively a monopsony – *sell to us at our price, on our invoice terms, or get lost*. Trying to sell into a world of enormous corporate cartels is considerably more difficult than it was forty years ago, when every sector in America was smaller, more diverse and more dynamic.

Also, consider the need for new products and services in a country full of concentrated industries. When a company had dozens of potential competitors in various geographic regions, there was an incentive to innovate before the other guy does. In a concentrated market, competitors are few, and growth may come more from mergers and government lobbying than new product lines. For entrepreneurs, why start something new in such an environment? The current tech boom might serve as a counterexample, but consider that for most venture-backed companies, the ultimate exit plan is for sale of the firm to an existing behemoth, not continued independent operations.

The American entrepreneurial mythos arose in an environment that was perfect for supporting new businesses: rapid growth, technological change, constant competition, limited government intervention. We need to find ways to bring that environment back.

Q1. A suitable title for the passage would be

- ☐ a) America: An Age of Mergers and Acquisitions
- ☐ b) The loss of the Entrepreneurial Edge in America
- ☐ c) The Adverse Impact of Capitalism and Conglomeration in America
- ☐ d) The road to the loss of the Entrepreneurial Edge in America

Q2. Which of the following best summarizes the finding(s) of Hathaway and Litan's report?

- ☐ a) Entrepreneurs play a critical role in business dynamism, a process vital to sustained economic growth.
- ☐ b) Big corporations continue to do well in America, and business leaders have become more risk averse.
- ☐ c) There has been a persistent decline in entrepreneurial ventures across the country.
- ☐ d) America should do everything it can to encourage entrepreneurs to stay in this country.

Q3. Which of the following best represents the key argument made by the author in the passage?

- ☐ a) Monopsony is a market situation in which there is only one seller and monopolistic competition has driven small players out of the market.
- ☐ b) Consolidation of nearly all industries in the hands of a few firms has reduced the bargaining power of market entrants.
- ☐ c) Consolidation of the financial sector has had a cascading effect on almost all other industries.
- ☐ d) Large banks lend only to large firms and thus entrepreneurs run from pillar to post for seed capital.

Q4. The author of the passage corrects which of the following assumptions regarding the prevalent tech boom in America?

- ☐ a) The business model of new technology companies is not viable in America in the long term.
- ☒ b) **Venture-backed start-ups with high potential for growth disrupt the narrative of concentrated markets.** ✓ **Your answer is correct**
- ☐ c) Silicon start-ups, far from being growth-oriented, are actively seeking monopolistic buyers.
- ☐ d) Most of the tech start-ups are going to go bankrupt unless acquired at unreal prices by aggressive behemoths like Facebook.

DIRECTIONS *for questions 5 to 8:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

It is a general weakness of men dealing with reason and delivering ideas that they are able to convince themselves that their words represent a break with the past and a new beginning. In the early stages of a revolution, history is at its most malleable. Disorder and optimism combine to wipe out those truths artificially manufactured by the preceding regimes. At the same time, they usually wipe out the memory of any inconvenient real event.

We have great difficulty dealing with philosophy in the context of real events. These two categories seem to live on separate planets. We are still convinced that violence is the product of fear and fear the product of ignorance. And yet, since the beginning of the Age of reason, there has been a parallel growth in both knowledge and violence, culminating in the slaughters of the 20th century.

Also, revolutions do not begin on dates, although we constantly search for that kind of reassuring touch point. An argument is sometimes made that the assumptions and methods of applied reason where all the key elements of modern intellectual thought can be found were first developed by the Inquisition. The Inquisitors were the first to formalize the idea that to every question there is a right answer. The answer is known, but the question must be asked and correctly answered. Relativism, humanism, common sense and moral beliefs were all irrelevant to this process because they assume doubt. Since the Inquisitors knew the answer, doubt was impossible. Process, however, was essential for efficient governance and process required that questions be asked in order to produce the correct answer.

When the Inquisition was created in the thirteenth century, no one, least of all Pope Gregory, understood what was being set in motion. Issuing a bull which made the persecution of heresy the special function of the Dominicans hardly seemed a revolutionary step. The Inquisitors' definition of truth was arrived at slowly, as was the process which permitted them to establish it. But as each detail of that process emerged, so the assumptions involved became clear.

Everything the Inquisition did – except the execution of the guilty – took place in secret. Public silence surrounded the work of the travelling Inquisitors. Unlike judges, magistrates, nobles and kings, who have always worn some symbolic costume, the Inquisitors wore the simplest, most anonymous black, like the proverbial accountant. And while their power permitted them to do their work on the basis of accusations and denunciations, what they really wanted were complete inquisitions. Being already in possession of the truth, they were interested in the rational demonstration of it by each victim. Perhaps the most telling detail was that each of these secret tribunals included a notary. His job was to record every word of every question and answer. These notarised manuscripts became the perpetual records of truth. But again, the purpose of such exactitude was to glorify the methodology, not the outcome. The notary was there to confirm the relationship between a priori truth and assembled fact. On the surface the Inquisitors were torturers and monsters. On a more profound level they were moral auditors.

Q5. From the passage, one can understand that the revolutionary aspects of the Inquisition involved

- ☐ a) asking questions and providing clear answers.
- ☒ b) **the persecution of heresy and the execution of unbelievers and other people found guilty.**
- ☐ c) exploring the constitution of questions, answers and their relationship with the truth.
- ☐ d) preserving certified and attested manuscripts which became the perpetual record of truth.

Q6. Which of the following describes the key elements of the thought developed during the Inquisition?

- ☐ a) Establishing order and prioritizing reason.
- ☐ b) **Impossibility of dubiousness.**
- ☐ c) Humanism, common sense and relationism.
- ☐ d) Process for efficient administration and control or exercise of authority.

Q7. After reading the passage, one can understand, from it, all of the following sentences EXCEPT?

- ☐ a) The inquisitors executed their victims overtly.
- ☐ b) **The answers provided by the victims were evaluated against the truth, which is already known.**
- ☐ c) The Inquisitors promoted violence by feeding on fear and ignorance in people's minds.
- ☐ d) The notary verified the relationship between what is already known and the constructed actuality.

Q8. The phrase “such exactitude” in the context of the passage can be inferred to mean

- ☐ a) certainty of judgement and rational demonstration.
- ☐ b) **the slow but steady details of the process by which the exact truth was defined and established.**
- ☐ c) notarizing every detail in order to glorify the end result.
- ☐ d) preciseness involved in recording the questions and answers.

DIRECTIONS for questions 9 to 12: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

...**E** O Wilson, the father of biodiversity, described biodiversity as an assemblage that 'has eaten the storms – folded them into its genes – and created the world that created us. It holds the world steady.' We tend to think of biodiversity as a landscape of teeming jungles and coral reefs, its destruction manifesting as forest clearance and species extinction. However, [...] biodiversity is [also] what maintains the resilience and flexibility of the environment as a whole, so that life can weather the inevitable 'storms'.

The global Convention on Biological Diversity defines its subject as variability among living organisms at three different levels: within species, between species, and of ecosystems. The first diversity, 'within species', is at the level of the gene. A species is made up of individuals. For example, the 10,000 or so species of ant are estimated to comprise a staggering 10^{15} individuals. With the rare exception of twins, each of these individuals will have their own unique combination of genes. If we destroy half of the ants in each species, we will still have 10,000 kinds of ant, but we'll have lost 50 per cent of each species' genetic diversity... A wide genetic diversity gives us more options in the face of rapid environmental change...

The second layer is diversity 'between species'. This is the definition of biodiversity with which we are most familiar – the fantastic assortment of animals, plants and micro-organisms in the world...

Lastly, we have 'diversity of ecosystems'. Species interact with each other and with the sunlight, air, soil and water to form ecosystems. From the arctic tundra to tropical rainforest, from estuaries to the midnight zones of the deep sea, the Earth houses a wealth of ecosystems... An ecosystem might be as large as the Great Barrier Reef or as small as the community of sponges, algae and worms hosted on a spider crab's shell...

The species within an ecosystem compete for resources such as light and food – but they also rely on each other. [C]oral reefs provide shelter for 25 per cent of our marine life. Bacteria recycle dead matter into nitrates, the only compounds from which plants can build proteins. Ecosystems provide 'services' that support life both within and beyond the ecosystem...

One intriguing natural phenomenon is that, in any given ecosystem, a few species will be very numerous, but most will be quite scarce. That is, common species are rare, and rare species are common. Just as genetic diversity provides species with resilience to environmental change, species diversity increases the resilience of ecosystems... [So], an ecosystem's diversity might reflect what's happened in its environmental past and indicate its potential to adapt to future change.

The irony is that the word 'biodiversity' has currency mostly because humans are in the process of destroying what it refers to... The philosopher Bryan Norton likened the Earth to a patient whose survival is dependent on a life-support machine. Hospital staff enter and announce that, in order to increase the hospital's revenue, they will be selling a few components of the machine. 'It's got so many wires and screws, it can't possibly need them all,' they blithely assure the patient. Would you take that gamble?...

- Q9.** All the following can be inferred to be true based on the last para of the passage EXCEPT that
- ☐ a) it is ironical that the destruction of biodiversity is leading to an increase in awareness about what biodiversity is.
 - ☒ b) 'Would you take that gamble' is a rhetorical question posed by the author to suggest we wouldn't take such a gamble.
 - ☐ c) the author uses the analogy of the patient and hospital to explain how earth's biodiversity is on the verge of annihilation.
 - ☐ d) wires and screws are a metaphor for the biodiversity of Earth, without which things wouldn't function properly.

Q10. An ecosystem's diversity can reflect its potential to adapt to future change because

- ☐ a) ecosystems with species diversity may have an insurance against environmental changes.
- ☐ **b) ecosystems which have a few common and abundant species adapt better to change than ecosystems which have a large number of rarer species.**
- ☐ c) ecosystems need both common and rare species to flourish.
- ☐ d) ecosystems that have genetic diversity within some of its species can withstand change better.

Q11. Which of the following can be inferred from the fourth para of the passage ('Lastly, we have... crab's shell...')?

- ☐ a) An ecosystem can only be formed when species interact with natural elements.
- ☐ b) **Even small ecosystems can have diverse species.**
- ☐ c) Species that don't rely on other species cannot exist in an ecosystem.
- ☐ d) Ecosystems need a very specific set of natural conditions in order to thrive.

Q12. Which of the following studies will least enhance the depth of the author's central argument?

- ☐ a) A study that tries to understand whether the presence of different types of ecosystems in an environment affects the health of the environment
- ☐ b) **A study that estimates the effect the replacement of one species with a different one will have on the overall resilience of an ecosystem**
- ☐ c) A study that establishes the importance of species diversity within an ecosystem
- ☐ d) A study that surveys the nature of services one ecosystem provides to another dependent on it

DIRECTIONS *for questions 13 to 16:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Dora the Explorer is one of the most recognized Latinx characters on TV. She debuted on Nickelodeon almost 20 years ago. This past weekend, Dora moved to the big screen, in *Dora and the Lost City of Gold*. ... In the late 1990s, Chris Gifford, one of the show's creators, and two others were tasked with brainstorming the next hit on Nick Jr. After moving through various animals, they decided on a young girl who would go on adventures and ask the audience of pre-schoolers at home for help.

Originally, they imagined the girl would be white. But months into developing the show, the creative head at Nickelodeon, Brown Johnson, went to a conference where she learned that of the 80 prime-time characters under the age of 18, not a single one was Latinx. She came back and declared that the show they were working on would now feature a Latina. Eric Weiner, another creator of the show, says, "At the time, Pat Buchanan was running for president, spewing all this hatred about, 'We don't want Spanish speakers in our country.' So, this idea of not building barriers gave extra meaning and heart and urgency to the mission of the show."

The creators behind Dora set out to empower Latinx kids and normalize bilingualism. But they were all white. So, they brought in consultants like Carlos Cortes, a professor from the University of California, Riverside. Cortes helped with cultural sensitivity and answered big questions, like where Dora should be from. "Someone came up with the idea we should make her very embedded in one culture – Mexican or Puerto Rican or Cuban or what have you," says Cortes. But they couldn't agree which culture. "I said look, I think it's important that kids of different Latino backgrounds be able to identify with Dora." So, they decided to move forward with a pan-Latina character, not from anywhere in particular.

... Within less than a year, the show became the top commercial hit for pre-schoolers ages 2 to 5. Almost 20 years after her creation, Dora is now being re-imagined as a teenager in a live action film, where she sets off to find treasure in a fictional lost Inca city called Parapata. "Parapata is a name in Quechua, which means 'the rainy hill,' " says Americo Mendoza-Mori, a consultant on the film, who teaches Quechua at the University of Pennsylvania.

While Dora, the character, continues to be pan-Latina, the film grounds her in an actual geographical location: The Amazon rainforest. "We also want to use the movie as an opportunity to incorporate many aspects of the Andean knowledge," says Mendoza-Mori. Mexican actor Eugenio Derbez says, "I think Dora is an icon for kids, especially now that Latinos are being so, let's say, harassed by the administration."

The original team members behind Dora say they never expected anti-immigrant rhetoric to become so central to the American political discourse. "We hope that we had an impact on little kids who saw a character who spoke a different language or had a different skin colour than they did," says Gifford.

Q13. Nickelodeon went with a Latina character for Dora for all the following reasons EXCEPT:

- ☐ a) none of the prime-time characters under 18 were Latinx.
- ☒ b) to make sure their main character draws more attention than the existing set of prime-time characters. ✔ Your answer is correct
- ☐ c) to express disagreement with Pat Buchanan's philosophy of alienating Spanish speakers.
- ☐ d) to make a statement supporting diversity and bilingualism.

Q14. Which of the following statements, if true, contradicts the rationale of Carlos Cortes behind adopting a pan-Latina character for Dora?

- ☐ a) **A character embedded in one culture among Mexican or Puerto Rican or Cuban will be easy to relate to for that group of kids from Latino backgrounds.**
- ☐ b) **It was important for pre-schoolers from all Latino backgrounds to find some commonality with the main character.**
- ☒ c) **It is difficult for a kid from any one culture to relate to a character which has a mix of attributes from other cultures.** ✓ **Your answer is correct**
- ☐ d) Kids from various Latino backgrounds spot the similarities they share with the main character more easily than how they are different from the pan-Latino character.

Q15. The last two paras of the passage imply that

- ☒ a) **Dora's creators hope that her popularity will make kids more empathetic towards those different from them.** ✓ You
- ☐ b) **Dora's storyline effectively countered the anti-immigrant rhetoric taking over the American political discourse.**
- ☐ c) **little kids don't generally learn a lot from those different from them in language or skin colour.**
- ☐ d) **it is possible to make a powerful political statement against the establishment through films.**

Q16. Which of the following survey results, if true, would least validate the purpose of creating Dora?

- ☐ a) **A survey that demonstrates that watching Dora's adventures has turned many kids into bilinguals**
- ☐ b) **A survey that highlights that Dora is not popular amongst non-Latino kids**
- ☐ c) **A survey that shows that Dora is popular amongst kids from all Latino backgrounds**
- ☒ d) **A survey that proves kids who grew up watching Dora are less invested in the anti-immigrant rhetoric**

Q17. DIRECTIONS *for question 17:* The paragraph given below is followed by four summaries. Choose the option that best captures the essence of the paragraph.

Some observers believe that the American era is coming to an end, as the Western-oriented world order is replaced by one increasingly dominated by the East. The historian Niall Ferguson has written that the bloody twentieth century witnessed "the descent of the West" and "a reorientation of the world" toward the East. Realists go on to note that as China gets more powerful and the United States' position erodes, two things are likely to happen: China will try to use its growing influence to reshape the rules and institutions of the international system to better serve its interests, and other states in the system – especially the declining hegemon – will start to see China as a growing security threat. The result of these developments, they predict, will be tension, distrust, and conflict, the typical features of a power transition.

- ☐ a) **Niall Ferguson's prediction about the ascendancy of the East is likely to come true as China uses its growing influence amidst a power transition.**
- ☐ b) **Realists foresee an atmosphere of distrust and conflict because of the likelihood of China's use of its growing influence, through American decline, to manipulate the system for its own interests.**
- ☐ c) **With the American era coming to an end, China will go against other countries and use its clout for its own interests.**
- ☐ d) **One of the consequences of the decline of the American era is the rise of the Chinese hegemony which, realists believe, will give way to conflict and strife.**

Q18. DIRECTIONS *for question 18:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. Because I had worked on newspapers since I was very young I could never remember anything once I had written it down; as each day you wiped your memory clear with writing as you might wipe a blackboard clear with a sponge or a wet rag.
2. Some of the stories had been about boxing, and some about baseball and others about horse racing.
3. Writing them I had felt all the emotion I had to feel about those things and I had put it all in and all the knowledge of them that I could express and I had rewritten and rewritten until it was all in them and all gone out of me.
4. They were the things I had known best and had been closest to and several were about the first war.

Q19. DIRECTIONS *for questions 19 and 20:* The paragraph given below is followed by four summaries. Choose the option that best captures the essence of the paragraph.

According to the 18th-century economist Adam Smith, the value of the arts “in use” precedes their value “in exchange”. Once something is deemed desirable, the market can indeed establish its commercial price. But although the market can trade in the products of culture, it cannot express the value of culture as a process, or what it does. A cultural economics that captures the value of the arts has to understand value in use, and that involves broader ways of understanding ourselves and our world, for instance, anthropology and environmentalism. The value in use of the arts is that they help a society make sense of itself. They generate the symbols and rituals that create a common identity – that is why art and religion are so closely linked. Like religion, the arts give access to the spiritual. Art is a link to previous generations, and anchors us to history.

- ☐ a) **The value of the arts “in use” precedes their value “in exchange”. The latter focuses on the present market conditions while the former helps us to connect with our past.**
- ☐ b) **The commercial market bothers about the value of the arts “in exchange” but society is concerned about the value of the arts “in use”.**
- ☐ c) **The arts are a society's means of making sense of its history and culture, creating a common identity. A cultural economics needs to understand the value of the arts “in use” through a better understanding of man and environment.**
- ☐ d) **The market can establish the commercial price of art but cannot express its true value. Society needs to appreciate the value of the arts “in use”.**

Q20. DIRECTIONS *for questions 19 and 20:* The paragraph given below is followed by four summaries. Choose the option that best captures the essence of the paragraph.

The rise of Homo sapiens fundamentally altered the planetary ecosystem long before the invention of writing, the birth of René Descartes, or the first diesel pump. By killing off the large fauna, our prehistorical ancestors overturned the food chain that existed before us and began a separate chain of events that is still playing out. It might be that the truest meaning of human being, from the perspective of planetary history, is that we are a mass extinction event. Mass extinctions are no doubt catastrophic, but they are only tragic if nature is viewed as something perfect that we are destroying, rather than as a state of flux in which we are participating.

- ☐ a) Human beings have triggered catastrophes that have led to mass extinctions on the planet.
- ☐ b) Human beings have reversed the planetary food chain leading to a mass extinction that cannot be overturned.
- ☐ c) In the context of the planetary history, human beings are an event of mass extinction, but such extinctions are not tragic given the dynamic state of nature.
- ☐ d) In the larger planetary context, human beings have overturned the food chain, triggering a series of catastrophic events leading to mass extinction.

Q21. DIRECTIONS *for question 21:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. The increased use of hydropower is currently driving the greatest surge in global dam construction since the mid-20th century, meaning that most major rivers on Earth are now dammed.
2. Increased nutrient retention via sedimentation or gaseous elimination in dammed reservoirs influences downstream terrestrial and coastal environments.
3. Dams impede the flow of essential nutrients, including carbon, phosphorus, nitrogen and silicon, along river networks, leading to enhanced nutrient transformation and elimination.
4. Reservoirs can also become hotspots for greenhouse gas emission, potentially impacting how 'green' hydropower is compared with fossil-fuel burning.

Q22. DIRECTIONS *for questions 22 and 23:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.
Sentence: And then there are the deaths, plural, of the title character.

Paragraph: Two major Pinocchio films premiered this year, but it isn't too difficult to tell them apart. ____ (1) ____ One of them is Robert Zemeckis's live-action remake of the 1940 Walt Disney cartoon, with Tom Hanks as a cuddly Geppetto, and Joseph Gordon-Levitt providing the voice of Jiminy Cricket. ____ (2) ____ The other, directed by Guillermo del Toro, has Geppetto's flesh-and-blood son being killed by a World War Two bomb, Geppetto (David Bradley) carving a wooden boy in a drunken fury, and Mussolini's fascists ruling over Italy. ____ (3) ____ "Pinocchio dies in our film three or four times," del Toro tells BBC Culture, "and has a dialogue with Death, and Death teaches him that the only way you can really have a human existence is if you have death at the end of it. ____ (4) ____ There are roughly 60 versions of Pinocchio on film, and I would bet hard money that that doesn't exist in any of the other 60."

- ☐ a) **Option 1**
- ☐ b) **Option 2**
- ☐ c) **Option 3**
- ☐ d) **Option 4**

Q23. DIRECTIONS *for questions 22 and 23:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.

Sentence: The version on this page shows summer temperatures going back to the mid-19th century for the land areas of the Northern Hemisphere, relative to the average for 1971–2000.

Paragraph: In a world without human-caused climate change, we would expect to see records set fairly randomly, following the whims of our planet’s natural variations in climate. But global warming has effectively loaded the dice, with record heat outpacing record cold. _____(1)_____ This imbalance is starkly evident in the famous “warming stripes” graphics created by climate scientist Ed Hawkins of the University of Reading in England. These graphics render each year’s average temperature as a shade of red or blue, depending on how much above or below the long-term average it is. _____(2)_____ Although there is the odd pink or orange year scattered throughout the record, the pileup of deep red bars in recent decades immediately jumps out. _____(3)_____ Even 1998—which at the time was far and away the hottest summer (and year) on record because of an exceptionally strong El Niño event—has been far surpassed. _____(4)_____ Similarly, the 1990s were supplanted as the hottest decade by the 2000s, which were then replaced by the 2010s. The 2020s will eventually follow suit.

☐ a) **Option 1**

☐ b) **Option 2**

☐ c) **Option 3**

☐ d) **Option 4**

Q24. DIRECTIONS *for question 24:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. And there is a lovely flourish in one of the books, when the inner voice smugly promotes itself to ‘He, Lord Cromwell’.
2. My single caveat about the books in the trilogy is that Hilary Mantel’s sentences, in which vocabulary and shape mainly feel exactly calculated, hold one small syntactical irritation.
3. This is clearly an attempt to show that, as the writer has explained, she is ‘behind him, like a camera’, rather than omnisciently narrating his thoughts.
4. Rather than the traditional use of ‘he’ or the protagonist’s name in male-viewpoint fiction, the trilogy has favoured what will doubtless become known as the Mantel Referent Sub-Clause: ‘He, Cromwell.’
