

**DIRECTIONS** *for questions 1 to 4:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Renaissance philosophy is often presented as a conflict between humanism and scholasticism, or sometimes it's simply described as the philosophy of humanism. This is a deeply problematic characterisation, partly based on the assumption of a conflict between two philosophical traditions – a conflict that never actually existed, and was in fact constructed by the introduction of two highly controversial terms: 'humanism' and 'scholasticism' ...

One of the first attempts at writing a history of philosophy in a modern way was Johann Jacob Brucker's five-volume *Historia critica philosophiae* (1742-44) published in Leipzig. He didn't use the terms 'Renaissance' or 'humanism', but the term 'scholastic' was important for him. The narrative we still live with in philosophy, for the most part, was already laid down by him. It's the familiar narrative that emphasises the ancient beginning of philosophy, followed by a collapse in the Middle Ages, and an eventual recovery of ancient wisdom in what much later became called 'Renaissance philosophy'.

As we've come to know more about the period referred to by Brucker as the Middle Age, it has become clear that it's simply wrong to call it a decline. It is instead extraordinarily rich philosophically, and should be celebrated as hugely innovative. It's by no means a 'dark age'. Quite the contrary. So the view that emerges in Brucker stems from a lack of knowledge and understanding of the philosophy of that time.

The use of the term 'humanism' to signify a coherent movement was first introduced in the 19th century, around the same time as the advent of the term 'Renaissance'. Crucially, neither was initially used in connection with philosophy. Rather, they were used by art historians, especially prominent among them Jacob Burckhardt in his great work, *Die Kultur der Renaissance in Italien* (1860). Later, John Addington Symonds's magnificent work in seven volumes, *Renaissance in Italy* (1875-86), also made use of 'humanism' and 'Renaissance' as a means to discuss a particular era in the history of art. Both terms were formed in the tradition of Brucker and were intended to capture something new – to make clear a clean break from the supposed darkness and ignorance of the Middle Ages. They were conceptions of certain perceived historical developments or movements in art, and not formed to fit philosophy. Indeed, they still don't fit well.

One of the most prominent 20th-century scholars of Renaissance thought was the German American philosopher Paul Oskar Kristeller (1905-99). In his book *The Classics and Renaissance Thought* (1955), he notes that Renaissance humanism is 'a broad cultural and literary movement, which in its substance was not philosophical, but had important philosophical implications and consequences.' It is questionable that there ever really was a 'movement' other than in the mind of 19th- and early 20th-century historians. After all, the shared beliefs that Kristeller identifies are not unique to 'humanists'. Such beliefs were certainly prevalent during the 8th and 9th centuries when the English scholar Alcuin (c735-804) set about organising teaching in the empire of Charles the Great, as well as in the 12th century when Aristotle and Avicenna were being translated into Latin...

**Q1.** It can be inferred from the passage that

- ☐ a) the philosophy of the Middle Age is not distinctly different from those of the subsequent eras.
- ☐ b) the philosophy of the Middle Age represented a lower level of intellectuality compared to those of the previous and subsequent eras.
- ☐ c) the philosophy of the Middle Age was under-appreciated despite being ahead of its time.
- ☐ d) the philosophy of the Middle Age was replaced by the Renaissance philosophy in the 19th century, according to Brucker.

**Q2.** The author mentions the book 'The Classics and Renaissance Thought' to strengthen the argument that:

- ☐ a) There was never really a philosophical movement justifying the use of the term 'renaissance'.
- ☐ b) Renaissance humanism has more to do with culture than with philosophy.
- ☐ c) Renaissance humanism had important philosophical implications and consequences.
- ☐ d) The terms 'renaissance' and 'humanism' do not fit coherently into philosophy.

**Q3.** Which of the following is the author most likely to approve of regarding the purpose behind using the terms 'humanism' and 'Renaissance'?

- ☐ a) To discuss a new era of art historically different from its previous forms
- ☐ b) To highlight the renaissance of philosophy following the dark Middle Ages
- ☐ c) To show that art resurfaced as a new movement from an age of ignorance
- ☐ d) To find a parallel between evolution of philosophy and art movements

**Q4.** The purpose of the passage is primarily to

- ☐ a) explain that Renaissance Humanism is not a distinct movement in art, but just a refinement of ancient principles.
- ☐ b) argue that Renaissance Humanism as a movement in philosophy didn't really succeed.
- ☐ c) highlight the decline of philosophy prior to the 18<sup>th</sup> century and its subsequent renaissance during the 19<sup>th</sup> century.
- ☐ d) discuss whether the philosophy during the 18<sup>th</sup> and 19<sup>th</sup> centuries represents a distinct movement.

**DIRECTIONS** *for questions 5 to 8:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

The Prussian state that had emerged by the nineteenth century and that would become the foundation for a unified Germany was the model of an absolutist dictatorship. But because the unaccountable sovereign ruled through an increasingly institutionalized bureaucracy, there was regularity and transparency in the government's behavior that over time evolved into a legal constraint on arbitrary despotism. It [...] facilitated Germany's economic growth and rapid industrialization in the second half of the nineteenth century [and] became the model for liberal autocracy everywhere. Contemporary Singapore is sometimes compared to nineteenth-century Germany for just this reason...

The definition of the rule of law is law as a constraint on political power, including the most powerful political actors in the political system... [I]n many civilizations, the rule of law had its origins in religion, which provided both the substance of law as well as an institutionalized hierarchy of religious specialists who could interpret it. In Christian Europe, following the Catholic church's revival of Roman law in the eleventh century, a wide range of legal institutions were created centuries before the first absolutist monarch began accumulating power in the late sixteenth century. Indeed, absolutist [monarchy was] limited in scope by the strong legal traditions that prevailed across Europe.

... Germany was virtually defined by legal institutions like the Diet of the Empire and the host of feudal rights and duties laid out in countless charters and contracts. It was against this background that the new rising absolutist monarchs began trying to erode the earlier concept of law, which vested sovereignty in God (in practice, via God's agent, the church), and started to claim sovereignty for themselves. This argument was sometimes based on a divine right of kings - God's direct delegation of sovereign authority to a particular ruling house. But beginning in the mid-seventeenth century, a number of thinkers, including Hugo Grotius, Jean Bodin, Thomas Hobbes, and Samuel Pufendorf, began formulating novel theories that vested sovereignty in monarchs without appeal to religious authority.

But the new secular grounding of absolutism in the state was not necessarily a boon to princely power. While sovereigns could claim absolute authority free of earlier religiously based legal constraints, the justification for this, according to these new theorists, lay in the fact that they in some sense "represented" the broader interests of the whole community. In Hobbes's Leviathan, for example, the monarch rules legitimately only because his authority rests on an implicit social contract by which he agrees to protect the citizens' fundamental right to life. Though the ruler is not elected, he in some sense embodies the public interest in peace and not the private interest of his family. As political theorist Harvey Mansfield points out, the state becomes an abstraction impersonally representing the whole community, and not the instrument of rule of one particular group within the society... All of these ideas played themselves out in the evolution of Prussian law. Strong-minded leaders could act in defiance of law and faced no powerful independent judicial institution that could stand in their way. And yet ordinary citizens in their dealings with one another and with the state could expect increasingly uniform and impersonal treatment...

**Q5.** Which of the following is a similarity between the 19<sup>th</sup> century Prussian state and the 11<sup>th</sup> century Christian Europe?

- ☐ a) Both applied a legal constraint on absolutist rulers.
- ☐ b) Both had rule of law based on religion.
- ☐ c) Both hindered the functioning of their monarchies.
- ☒ d) **Both had unaccountable sovereigns restricted by legal systems.** ✖ Your answer is incorrect

**Q6.** The 'secular grounding of absolutism' was based on which of the following preconditions?

- ☐ a) Monarchs had sovereignty without appeal to religious authority.
- ☐ b) Sovereigns had absolute authority free of religious legal constraints.
- ☐ c) The monarchs' power is contingent on representing the interests of the broader community.
- ☐ d) **Sovereigns had to represent the community more than they did religion.**

**Q7.** Which of the following can be inferred regarding the concept of 'strong-minded leaders' as discussed in the last para of the passage?

- ☐ a) Absolute monarchs were beyond the constraints of Prussian law.
- ☐ b) Ordinary citizens and the rulers in Prussia were not subject to the same law.
- ☐ c) Strong-minded Prussian rulers could defy the law but ordinary citizens usually could not.
- ☐ d) **The Prussian law was effective except when rulers' authority was questioned.**

**Q8.** The author mentions that 'But the new secular grounding of absolutism in the state was not necessarily a boon to princely power' primarily to highlight that princely power

- ☐ a) lost the agency it enjoyed earlier as an agent of divine sovereignty.
- ☐ b) was not absolute as it was constrained by an implicit social contract.
- ☐ c) was undermined by the need for governments to be transparent in their functioning.
- ☐ **d) was not absolute because of the rulers' duty to guard the fundamental rights of citizens.**

**DIRECTIONS** *for questions 9 to 12:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

In the polemical debates that occur over individualism versus collectivism or capitalism versus socialism, people tend to cite selectively examples from the natural world to prove that humans are by nature either aggressive, competitive, and hierarchical or, alternatively, cooperative, peaceful, and nurturing... [T]hese apparently dichotomous characteristics are in fact intimately linked to one another in evolutionary terms. Cooperation and reciprocal altruism emerged initially because they conferred benefits on the individuals who possessed them. As groups form, competition between them begins, providing an incentive for higher levels of cooperation within the group... In the biologist Richard Alexander's words, human beings cooperate to compete.

Students of political development have described a phenomenon labeled "defensive modernization": the appearance of a new military technology in one state forces competing societies not only to acquire the technology, but to acquire the political and economic institutions necessary to produce that technology... Something like this happened to Turkey in the early nineteenth century and to Japan forty years later as they faced Western military power.

The large size and rapid growth (in evolutionary time) of the human brain is related to a similar series of arms races between human beings, a development that then made possible language, society, the state, religion, and all of the subsequent cooperative social institutions that human beings have devised. Wrangham points to the pygmy chimp, or bonobo, as an evolutionary alternative that shows that human beings did not need to turn out as violent and aggressive as they are. Bonobos are a liberal's dream animal: the males are much less violent than chimpanzees; both males and females compete less in status hierarchies; and females play a much more important political role in a bonobo troop. The question, which we may never have the evidence to answer, is whether it is just an accident that humans descended from a chimp-like ancestor rather than a bonobo-like one, for it may well have been that the aggression and violence of the chimp-like progenitor of both humans and present-day chimps was what drove intelligence, sociability, and a host of other cooperative characteristics of human nature.

The psychologist Nicholas Humphrey and the biologist Richard Alexander separately suggested that one reason the human brain developed as quickly as it did was the need for humans to cooperate, deceive, and decipher each other's behavior. In the five million or so years since the human line broke off from that leading to chimpanzees, the brain has more than tripled its size and expanded to the limits of the mother's birth canal. In evolutionary terms, this change occurred with extraordinary rapidity. People thought for many years that the advantages of the intelligence a large brain made possible were obvious in terms of the requirements of hunting, toolmaking, and the like. But other animals hunt, make and use tools, and indeed create and pass on a kind of elementary culture without nearly as developed cognitive capabilities. Humphrey and Alexander argued that the most important and dangerous part of a human being's environment quickly became other human beings, such that developing cognitive skills for social interaction quickly became the most critical requirement for evolutionary fitness...

**Q9.** It can be inferred from the author's discussion about bonobos and chimps that

- ☐ a) the direction of human evolution was shaped by the aggression of our progenitors.
- ☐ b) humans are competitive because of an aggressive ancestor.
- ☐ c) the chimp-like progenitor of both humans and present-day chimps shares an ancestor with the bonobos.
- ☒ d) humans and present-day chimps evolved differently because of aggressive ancestors. **✗ Your answer is incorrect**

**Q10.** Which of the following, if true, will not weaken the arguments made by Humphrey and Alexander in the last paragraph of the passage?

- ☐ a) Many other species with smaller brains share with humans the trait of being dangerous to members of their own kind.
- ☐ b) Some animals like bonobos have a more complicated culture as compared to humans even though their brains are smaller.
- ☐ c) It has been proven that cognitive intelligence is not a function of the size of the brain.
- ☐ d) **Animals with smaller brains than humans sometimes display the same cognitive skills as humans.**

**Q11.** All of the following, if true, will strengthen the arguments in the passage EXCEPT:

- ☐ a) Evolution of the human brain wouldn't have happened as rapidly if they didn't compete with each other.
- ☐ b) Foreign military competition drives domestic political cooperation.
- ☐ c) The ability to work together in groups constituted a competitive advantage for early humans.
- ☐ d) **Qualities corresponding to group cooperation spread more rapidly than qualities corresponding to competition in the evolution of humans.**

**Q12.** The biologist Richard Alexander's words 'human beings cooperate to compete' in the context presented in the passage will be contradicted if it is proven that

- ☒ a) **human cooperation is not contingent on obtaining any evolutionary advantage.** ✓ **Your answer is correct**
- ☐ b) humans compete with each other only when there is a paucity of resources.
- ☐ c) human groups without the skillset to compete have perished in the evolutionary race.
- ☐ d) **human groups have chosen cooperation even in the face of impossible odds.**

**DIRECTIONS** *for questions 13 to 16:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Corporate takeovers are likely a close second to insider trading as a popular (and populist) impassioned belief about unfairness in financial markets. The scholarly literature on corporate takeovers has made some major contributions. The first contribution is to recognize that the managers of a firm are agents for the shareholders, who own the firm. The job of the managers is to maximize the wealth of the shareholders. What the press typically represents as a takeover of a corporation by outsiders is, in fact, the outcome of competition among alternative teams of managers for the right to manage the shareholders' assets. The "outsiders" are not raiders who seize control of the corporation. Rather, the shareholders remain in control and exercise their rights of control to replace the current team of managers with a new team that is more to their liking.

Now, a populist might argue that the outsiders are able to force the current management out of office only by purchasing enough shares so that the outsiders can acquire a majority of the seats on the firm's board of directors. But the outsiders can acquire shares only by offering prices that are high enough to induce a sufficient number of the current shareholders to sell their shares. Current shareholders who sell their shares do so voluntarily. The term takeover does not seem compatible with the voluntary sale.

The second contribution is to identify the reasons why investors might want to replace the current team of managers with a new team. One reason is to mitigate a problem of agency. Sometimes a group of investors believes that a different team of managers can operate the firm more profitably... The price that the outsiders will offer to the shareholders to induce them to sell their shares reflects the increase in profit that the outsiders believe the new managers can produce. It is instructive to recognize that the outsiders are risking their own money, believing that their expectation of a higher profit is correct.

The third major area in which economists have contributed to the analysis of corporate takeovers is the empirical determination of which parties gain and which parties lose in contests for the control of corporations. Using event studies, economists have established that the shareholders of corporations that are taken over almost invariably gain wealth. This fact invalidates the populist argument that the shareholders in a firm are harmed by the activities of "raiders." To the contrary, by replacing the firm's current managers with new managers, the raiders make the firm more profitable, which delivers an increase in wealth to the firm's current shareholders by increasing the market value of their shares. These event studies support the efficient markets hypothesis by showing that the prices of a firm's shares begin to increase at the first sign that a group of investors is attempting to take over the firm. Moreover, these prices fluctuate to reflect information about the probability that the new investors will succeed in acquiring control of the firm. The losers in battles to replace a firm's current management are, of course, the current managers...

**Q13.** Which of the following, if true, is incompatible with the author's remarks against the populist argument mentioned in the second paragraph of the passage?

- ☐ a) **Outsiders use misinformation to bring down the share prices and induce panic selling by shareholders.**
- ☐ b) A majority of the shareholders take action only on the basis of the actions taken by some of the board of directors.
- ☐ c) Most shareholders are not in a position to know what the right price of the shares they are selling should be.
- ☐ d) **Outsiders do not have a company's best interests when they effect a corporate takeover.**

**Q14.** The author believes that “*the prices of a firm’s shares begin to increase at the first sign that a group of investors is attempting to take over the firm*” on the basis of the assumption that the share prices

- ☐ a) **fluctuate to reflect the probability of acquiring control of the firm.**
- ☐ b) are an accurate reflection of the capability of the investors of the company.
- ☐ c) are an accurate reflection of the present earning potential of the company.
- ☐ d) **are proportional to the future prospects of the company.**

**Q15.** All of the following can be inferred regarding the major contributions of scholarly literature on corporate takeovers EXCEPT:

- ☐ a) **The shareholders are the proxy owners of the firm even though the managers make all the decisions.**
- ☐ b) Shareholders can replace their managers if they feel a better job can be done by a different set of managers.
- ☐ c) It is possible to empirically determine who gains and who loses in the process of a corporate takeover.
- ☐ d) **Competition among alternative teams of managers generates wealth for shareholders.**

**Q16.** Which of the following, when true, supports the invalidated argument mentioned by the author in the fourth paragraph (“This fact invalidates the populist argument that the shareholders in a firm are harmed by the activities of “raiders.”)?

- ☐ a) **Raiders do not always succeed in their plans to make the firm more profitable after takeover.**
- ☐ b) An impending takeover by raiders diminishes the share value.
- ☐ c) Some shareholders hold on to their shares for sentimental reasons as opposed to monetary reasons.
- ☐ d) **Raiders don’t discuss their plans for a corporation with the shareholders before taking over.**

**Q17. DIRECTIONS** *for question 17:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Contrary to the common belief that having more time facilitates goal pursuit by allowing for more flexibility and fewer restrictions, studies show that long deadlines may produce unintended detrimental consequences on goal pursuit. Research identifies a mere deadline effect, showing that longer versus shorter deadlines, once imposed, lead consumers to infer that the focal goal is more difficult, even when the deadline length results from incidental factors that cannot be meaningfully used to make any other diagnostic inferences about the task itself besides completion frame. Further, these difficulty inferences consequently lead consumers to commit more resources (e.g., time and money). Thus, while long incidental deadlines might be beneficial for essential yet often underestimated aspects of long-term well-being, the unintended difficulty perception arising from deadline length will sometimes sabotage goal pursuit.

- ☐ a) **Longer deadlines could be counter-productive by inducing lead consumers to waste resources.**
- ☐ b) Longer deadlines are detrimental to goal pursuit because they wrongly alter the perception of lead consumers.
- ☐ c) Longer deadlines make goal pursuit more difficult by inducing lead consumers to commit unnecessary resources.
- ☐ d) **Longer deadlines sabotage goal pursuit because of unintended difficulties arising out of wrong inferences.**

**Q18. DIRECTIONS** *for question 18:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.  
Sentence: *When you had an anam cara, your friendship cuts across all convention, morality, and category.*

Paragraph: In the Celtic tradition, there is a beautiful understanding of love and friendship. One of the fascinating ideas here is the idea of soul-love; the old Gaelic term for this is *anam cara*. *Anam* is the Gaelic word for soul and *cara* is the word for friend. So *anam cara* in the Celtic world was the “soul friend.” In the early Celtic church, a person who acted as a teacher, companion, or spiritual guide was called an *anam cara*. \_\_\_\_\_(1)\_\_\_\_\_ It originally referred to someone to whom you confessed, revealing the hidden intimacies of your life. With the *anam cara* you could share your inner-most self, your mind and your heart. This friendship was an act of recognition and belonging. \_\_\_\_\_(2)\_\_\_\_\_ You were joined in an ancient and eternal way with the “friend of your soul.” \_\_\_\_\_(3)\_\_\_\_\_ The Celtic understanding did not set limitations of space or time on the soul. \_\_\_\_\_(4)\_\_\_\_\_ There is no cage for the soul. The soul is a divine light that flows into you and into your Other. This art of belonging awakened and fostered a deep and special companionship.

- ☐ a) **Option 1**
- ☐ b) Option 2
- ☐ c) Option 3
- ☐ d) **Option 4**

**Q19. DIRECTIONS** *for question 19:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. This adaptation of the language to accommodate the African cultural experience, combined with the unconscious structural adjustments attendant on language contact and foreign-language learning, accounts for the development of an English that is distinctively African.

2. In attempting to transcreate African cultures through their literary works in English, African writers have found it necessary to adapt and indigenise certain aspects of the language, including both lexicon and narrative style.

3. As in other former colonial societies, creative writing has contributed to the emergence and recognition of AfrE as a distinct variety or group of varieties.

4. The work of the Nigerian novelist Chinua Achebe is an example of such creative indigenization.

**Q20. DIRECTIONS** *for questions 20 and 21:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Euripides has been compared unfavorably to Aeschylus and Sophocles on account of his greater reliance on poetic oratory and rhetoric, rather than genuine dramatic intensity and because of his use of Socratic or Sophistic philosophy in his works. However, those same qualities have in some ways made him more popular than his contemporaries in the modern world because his themes and language appear more accessible and comprehensible. Even so, he received less critical acclaim than his rivals, supposedly to his chagrin.

- ☐ a) **Euripides' themes and language, despite being unpopular with critics for the lack of dramatic intensity in his work, were popular with the modern audiences.**
- ☐ b) Euripides' work was criticised in the past for its rhetoric and lack of drama, but slowly gained popularity amongst modern critics.
- ☐ c) Euripides was underrated during his time, but his style of rhetoric and poetic oratory eventually got its due from modern audiences.
- ☐ d) **Euripides' work was criticised during his time for the same qualities that made him more popular in the modern world.**

**Q21. DIRECTIONS** *for questions 20 and 21:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Social constructivism is a relatively new theory about world politics, one that developed in the late 1980s and has been becoming increasingly influential since the mid-1990s. The approach arose out of a set of events in world politics, notably the disintegration of the Soviet empire, as symbolized most notably by the fall of the Berlin Wall in 1989. This indicated that human agency had a much greater potential role in world politics than implied by realism and liberalism. But the theoretical underpinnings of the approach are much older and relate to a series of social-scientific and philosophical works that dispute the notion that the social world is external to the people who live in it, and is not easily changed.

- ☐ a) **Social constructivism, as a theory, has gained popularity because of its basis that people shape the society we live in.**
- ☐ b) The assumption that the social world is external to the people who live in it separates social constructivism from realism and liberalism.
- ☐ c) Social constructivism has evolved out of events and theoretical works that show that human agency has a key role in world politics.
- ☐ d) **Realism and liberalism do not give human agency the credit for its role in world politics, but social constructivism does.**

**Q22. DIRECTIONS** *for question 22:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.

Sentence: *Any steps toward industrial development, the EIC noted, was to make the colony still more independent of the ‘Mother Country’.*

Paragraph: Occasionally, a British official suggested that Indian manufacturing might offer efficiencies. In the 1770s, complaints about the quality of English arms prompted a suggestion to minimise importation of stores that could be manufactured in India. But the EIC’s (East India Company) Court of Directors dismissed the consequent proposal to manufacture drums and fifes in India. \_\_\_\_ (1) \_\_\_\_ The EIC likewise rejected a proposal to develop lead, iron, copper and tin mining in Bengal on the grounds that it would cost the EIC profit and control. \_\_\_\_ (2) \_\_\_\_ It also risked supporting the ‘supply to the neighbouring powers of Military Stores, and the teaching of them new means of independence and new Sources of Wealth’. \_\_\_\_ (3) \_\_\_\_ In short, proposals that might promote industrial development in Bengal were ‘very impolitic and contrary to our government’s maxims’. \_\_\_\_ (4) \_\_\_\_ Certainly, they might bring ‘great and important advantages’ to Bengal, ‘considered as independent’. But of course Bengal was not independent; it was part of the British Empire.

- ☐ a) **Option 1**
- ☐ b) Option 2
- ☐ c) Option 3
- ☐ d) **Option 4**

**Q23. DIRECTIONS** *for questions 23 and 24:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. As the organizational and technical forces of production change – as factories destroy handicraft industry, for example – the social relations of production change too.

2. And economic change threatens all of that.

3. The process of social change was not merely a matter of new inventions pressing on old institutions: it was a matter of new classes displacing old ones.

4. For society, said Marx, is organized into class structures, aggregates of individuals who stand in some common relationship – favorable or otherwise – to the existing form of production.

**Q24. DIRECTIONS** *for questions 23 and 24:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. To understand how genes instruct the fates of cells, Brenner needed an organism so small and simple that each cell arising from the embryo could be counted and followed in time and space.

2. Minuscule as it was, even the fly – “compound eyes, jointed legs, and elaborate behavior patterns” – was much too big for Brenner.

3. As a point of comparison, humans have about 37 trillion cells.

4. In the mid-1960s, in Cambridge, Sydney Brenner began to hunt for an organism that could help solve the puzzle of cell-fate determination.
