

DIRECTIONS *for questions 1 to 4:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

... **Concentration** is the sine qua non of the chess experience. In chess, concentration usually unfolds in quick succession through perceiving, desiring and searching. One could describe the feeling as a kind of evaluative hunting for trails of ideas that look and feel right... Good moves have the qualities of truth and beauty... The forces on the board are always embroiled, but concentration is particularly important when the pieces stop eyeing each other from a strategic distance, and come into direct tactical contact. At such moments, spotting a hidden detail could guarantee victory, while missing it could lead to inexorable defeat.

Concentration is not like a bulb that we can turn on and off with a switch, because we are not just the bulb; we are also the switcher and the switch. Humans are like thermostats receiving and sending out signals, seeking the optimal 'mental temperature' as ambient conditions around and within us change, and we're often abruptly adjusted against our will. We succeed in concentrating when we manage to convene the dispositions that matter for a task at hand and that is possible only if the right emotions co-arise and come along for the ride.

... The process of concentrating is more like a method of corralling and coordinating fissiparous parts of our psyche... It is important to distinguish concentration from similar or related phenomena that provide different 'meta-cognitive views' – contexts of meaning and activity that are valuable because they allow the mind to become aware of itself. Chess thinking provides a rich metacognitive context that leads us to believe that we should tease apart three notions that are related but often conflated – attention, flow and concentration. Attention is fundamentally grounded in perception (how we attend), flow is fundamentally grounded in experience (how we feel), and concentration is grounded in praxis (how we purposively coalesce).

We ask too much of attention and not enough of concentration. The recent cultural emphasis on attention risks subsuming too many variables of human experience, as if they could ever be held constant... All these variables are implicated in our capacity to attend, but they have their own kinds of agency, too, and they play with each other in unpredictable ways. The emergent properties arising from the psyche at play with itself in the world include amusement, enchantment, dissonance and distraction: these are not mere hindrances but more like a kind of data to be understood and integrated before we can exercise agency that is truly our own. We need to coalesce in order to concentrate, and concentrate to coalesce.

Sans concentration, we cannot enjoy the state of consciousness – called flow – that is part of the chess experience. Flow is a mental state characterised by intense absorption, loss of self-consciousness, goal-related feedback from the world and an altered sense of time. Flow experiences are deeply rewarding, and they arise when our skill level and challenge level are optimally matched; too little challenge and we get bored, too much and we feel anxious. Chess is a great way to access flow, yet – as a lodestar for living – flow has limitations. Ultimately, flow is not a virtue but a form of pleasure, promoting which might not lead to desirable qualities of character; just as likely it could yield an atomised society of sophisticated hedonists with gaming addictions and virtual-reality sickness. Unlike attention or flow, concentration prompts an awareness of mood, even a commitment to meaning, and an appreciation for method.

Q1. The author calls concentration 'the sine qua non of the chess experience' to indicate that

- ☐ a) it is impossible to indulge in the chess experience without concentration.
- ☐ b) one cannot perceive the truth and beauty of good moves without concentration.
- ☐ c) it is particularly important to concentrate when pieces come into direct tactical contact.
- ☐ d) concentrating at crucial junctures could be the difference between winning and losing.

Q2. 'Thermostats' as explained in the second para of the passage

- ☐ a) is a simile to show how humans interact with their ambiances.
- ☐ b) is a metaphor for how humans are influenced by whatever is surrounding them.
- ☐ c) is an analogy for humans optimising to make the most of their ambient conditions.
- ☐ d) is a metaphor for humans' ability to regulate themselves based on their ambience.

Q3. It can be inferred about 'meta-cognitive views' that

- ☐ a) concentration is different from phenomena which provide such views.
- ☐ b) they probably open doors to understanding our thinking.
- ☐ c) they are activities which help enhance awareness of our own mind.
- ☐ d) they can be achieved by the culmination of various aspects of our psyche.

Q4. The author's opinion about 'a lodestar for living' would most likely be something that

- ☐ a) doesn't involve the loss of self-consciousness.
- ☐ b) promotes virtue over pleasure.
- ☐ c) helps pursue meaning over method.
- ☐ d) buttresses a desirable character.

DIRECTIONS *for questions 5 to 8:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

...The policy trilemma, also known as the impossible or inconsistent trinity, says a country must choose between free capital mobility, exchange-rate management and monetary autonomy... Only two of the three are possible... Imagine a country that fixes its exchange rate against the US dollar and is also open to foreign capital. If its central bank sets interest rates above those set by the Federal Reserve, foreign capital in search of higher returns would flood in. These inflows would raise demand for the local currency; eventually the peg with the dollar would break. If interest rates are kept below those in America, capital would leave the country and the currency would fall.

Where barriers to capital flow are undesirable, the trilemma boils down to a choice: between a floating exchange rate and control of monetary policy; or a fixed exchange rate and monetary bondage. Rich countries have typically chosen the former, but the countries that have adopted the euro have embraced the latter. The sacrifice of monetary-policy autonomy that the single currency entailed was plain even before its launch in 1999.

In the run up, aspiring members pegged their currencies to the Deutschmark. Since capital moves freely within Europe, the trilemma obliged would-be members to follow the monetary policy of Germany... This monetary serfdom is tolerable for the Netherlands because its commerce is closely tied to Germany and business conditions rise and fall in tandem in both countries. For economies less closely aligned to Germany's business cycle, such as Spain and Greece, the cost of losing monetary independence has been much higher: interest rates that were too low during the boom, and no option to devalue their way out of trouble once crisis hit.

...The trilemma was an important outgrowth of the so-called Mundell-Fleming model, [...] named in recognition of research papers published in the early 1960s by Robert Mundell and Marcus Fleming, showing that monetary policy becomes ineffective where there is full capital mobility and a fixed exchange rate...

...Hélène Rey, of the London Business School, has argued that **a country that is open to capital flows, allowing its currency to float doesn't necessarily enjoy full monetary autonomy**. Her analysis starts with the observation that prices of risky assets tend to move in lockstep with the availability of bank credit and the weight of global capital flows, a reflection of a "global financial cycle" driven by shifts in investors' appetite for risk. That in turn is heavily influenced by changes in the monetary policy of the Federal Reserve, which owes its power to the scale of borrowing in dollars by businesses and householders worldwide.

When the Fed lowers its interest rate, borrowing in dollars becomes cheaper, driving up global asset prices, boosting the value of collateral against which loans can be secured. Global credit conditions are relaxed... Therefore, the Fed's monetary policy shapes credit conditions in countries that have both flexible exchange rates and central banks that set their own monetary policy. Thus, the policy trilemma is really a dilemma... Ms Rey's conclusion is more subtle: floating currencies do not adjust to capital flows in a way that leaves domestic monetary conditions unsullied, as the trilemma implies...

Q5. The last sentence of the passage implies that

- ☐ a) there is no exception to the trilemma.
- ☐ b) capital flows result in a realignment of floating currencies.
- ☐ c) domestic monetary policies prevent floating currencies from adjusting to capital flows.
- ☐ d) capital flows affect floating currencies and, thereby, the domestic monetary policy as well.

Q6. Which of the following best summarises the relationship between the bold sentence in the second para (S1) and the bold sentence in the fifth para (S2)?

- ☐ a) S2 presents an argument that strengthens the argument presented in S1.
- ☐ b) S2 presents an argument that, if proved to be true, invalidates the argument presented in S1.
- ☐ c) S2 presents evidence that proves the correctness of the argument presented in S1.
- ☐ d) S2 presents a conclusion that can be arrived at using the argument presented in S1.

Q7. The examples of Spain and Greece, in Para 3, go on to suggest that

- ☐ a) countries with similar business cycles benefit from pegging their currencies to each other.
- ☐ b) currency pegging doesn't leave elbow room for monetary policy adjustment to market conditions.
- ☐ c) the shift to Euro eventually resulted in the dismal financial shape of Greece and Spain.
- ☐ d) the Netherlands survived the crisis because its economy is closely aligned to that of Germany.

Q8. The 'policy trilemma' argument is reflected by which of the following statements?

- ☐ a) A country that allows its exchange rate to float can allow capital mobility and still retain its monetary policy independence.
- ☐ b) A country that fixes its exchange rate against the US dollar has to allow foreign capital flow to retain monetary policy independence.
- ☐ c) A country that doesn't regulate capital mobility, has to fix its exchange-rate if it wants to retain monetary autonomy.
- ☐ d) A country needs monetary autonomy in order to regulate exchange rate as well as capital mobility.

DIRECTIONS for questions 9 to 12: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

... Left Bank [in Paris] is a portrait of the overlapping generations born between 1905 and 1930, who lived, loved, fought, played and flourished in Paris between 1940 and 1950 and whose intellectual and artistic output still influences how we think, live, and even dress today. After the horrors of war that shaped and informed them, Paris was the place where the world's most original voices of the time tried to find an independent and original alternative to the capitalist and Communist models for life, arts, and politics - a 'Third Way'.

Those young men and women, budding novelists, philosophers, painters, photographers, poets, editors, publishers and playwrights, shaped by the ordeals of World War Two, did not always share the same political or cultural outlook, but they had three things in common: the experience of war, their brush with death and the elation of the Liberation of Paris. And they promised themselves to reenchant a world left in ruins. ...

After four years of Nazi occupation and daily torment, Paris's galleries, boulevards, jazz clubs, bistros, bookshops and the myriad daily newspapers and monthly reviews born in the last years of the war became forums for heated discussions, battle plans and manifestos... The flourishing publications, all edited within one square mile, boasted an audience well beyond Paris... They were heard and followed by decision makers in Europe and elsewhere in the world precisely because they originated from Paris.

Together, in Paris, this band of brothers and sisters created new codes. They founded the New Journalism, [...] and forever blurred the lines between literature and reportage... Philosophers founded new schools of thought such as Existentialism while setting up political parties...

Photographers reclaimed their authorship through photojournalism agencies such as Magnum; censored American writers such as Henry Miller published their work first in French; black jazz musicians, fleeing segregation at home, found consecration in the concert halls and jazz clubs of Paris, where New Orleans jazz received its long overdue appreciation while bebop was bubbling up. Some in the Catholic Church experimented with Marxism, while a colourist and former art gallery owner-turned-couturier named Christian Dior intoxicated the world with the 'New Look' in fashion design.

After 1944, everything was political; there was no escape. World citizens of the Left Bank knew this, and they did all they could to question both US policies and the Communist Party's views. Paris was, for them, both a refuge and a bridge to think in a different way. They opened up the possibility of a Third Way, ardently embracing the idealism of the United Nations and the glimmer of utopia in what would later become the European Union.

All of them, achieved a string of undeniable successes, [but also] left behind a litany of failures. Tony Judt addresses the latter in his academic work *Past Imperfect: French Intellectuals 1944–1956*... Paris intellectuals had so much power bestowed on them by circumstances and their own genius and yet failed, in his view, to change the world. Tony Judt called his book "an essay on intellectual irresponsibility." That they were expected to change the world in the first place raises the question: how did they arouse so much wild hope? Left Bank is as much about post-war Parisian intellectual irresponsibility as about political, artistic, moral and sexual incandescence.

Q9. The author of the passage is most likely to agree with which of the following interpretations of 'Third Way' as mentioned in the passage?

- ☐ a) A philosophy that alternates between the capitalist and the Communist way of thinking
- ☐ b) A perspective towards life and arts that is influenced neither by Communist policies nor by the US policies
- ☐ c) A social model shaped by the ordeals of the World War and the Nazi occupation of Paris
- ☐ d) An independent and original alternative that leaned more towards the policies of European Union than towards those of the US.

Q10. In the last line of the passage, 'post-war Parisian intellectual irresponsibility' refers to

- ☐ a) political, artistic, moral and sexual incandescence that prevailed in Paris after the Second World War.
- ☐ b) the environment of political liberty that made Paris the epicentre of intellectual renaissance after World War II.
- ☐ c) how Parisian intellectuals failed to change the world given the circumstances and their own genius.
- ☐ d) the founding of new schools of thought such as Existentialism by philosophers while setting up political parties.

Q11. Which of the following statements best explains the question, '...how did they arouse so much wild hope'?

- ☐ a) It is a rhetorical question that counters the false sense of greatness bestowed upon the Parisian intellectuals.
- ☐ b) It is a hyperbole that eulogizes the Parisian intellectuals and discredits any criticism levied against them.
- ☐ c) It is a sarcastic statement that elucidates how intellectuality without a sense of responsibility is a wasted cause.
- ☐ d) It reflects the credit due to the Parisian intellectuals for igniting the hope for change.

Q12. Which of the following is not a characteristic feature of the generation of intellectuals and artists discussed in the passage?

- ☐ a) They were all influenced by the trials and tribulations of war.
- ☐ b) They were original and independent in their voices which didn't subscribe to the dichotomy of capitalism and communism.
- ☐ c) They found refuge in Paris after being censored elsewhere for questioning the status quo.
- ☐ d) They created an atmosphere of openness for art, journalism and music.

DIRECTIONS *for questions 13 to 16:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Perhaps globalisation is a process that has been, in some sense, constrained by the authority of the nation-states, particularly in the twentieth century. It may be useful to touch upon the role of the public policy of nation-states in the context of globalisation. After the emergence of nation-states, each nation-state perceived that it was in its collective self-interest to promote or restrict involvement with citizens of other nation-states. While developments in technology enabled and accelerated the movements of goods, people and services, the policies of many nations tended to impose restrictions. A nation-state is presumed to restrict its citizens' involvement with other nation-states with only their collective self-interest in mind. It is, however, not easy to define what is in the collective self-interest of all its citizens or whether it is in the interest of only a few at the expense of others. In the context of public policy relating to globalisation, a critical issue is the trade-off between individual freedom and collective self-interest, and also whether the burden of proof lies with the individual or with the national authorities.

At a conceptual level, a distinction can be made between technology-enabled (or induced) globalisation and public policy induced restrictions or easing of restrictions. Globalisation has several dimensions, arising out of what may be called enhanced connectivity among people across national borders. Such enhanced connectivity is determined by three fundamental factors, viz., technology, individual taste and public policy. Cross-border integration can have several aspects: cultural, social, political and economic. For the purposes of this discussion, however, only economic integration is considered. Broadly speaking, economic integration occurs through three channels, viz., movement of people, of goods and of finance or capital.

First, with regard to the movement of people, the most notable achievement of recent globalisation is the freedom granted to many, if not all, from the tyranny of being restricted to a place and being denied the opportunity to move and connect freely. Second, with regard to trade in or movement of goods across national boundaries, two types of barriers are generally described, viz., natural barriers (i.e., barriers due to natural formations) and artificial barriers (i.e., barriers due to economic policies). Of late, while multilateral trade agreements are encouraging reduction in such artificial barriers, developments in technology are also making it difficult for national authorities to enforce artificial barriers. The pace and nature of globalisation will naturally depend on the combined effect of technology and public policy, both at the national and international levels. The third dimension relates to capital movements, for which, too, the interplay between technology and public policy becomes relevant. There have been, however, some special characteristics of capital flows in recent years, led mainly by revolutionary changes in telecom and computing capabilities. These have highlighted the phenomenon of what is described as 'contagion', which implies the risk of a country being affected by developments totally outside of its policy ambit, although the domestic policy may, to some extent, influence the degree of its vulnerability to the contagion.

...In any case, cross-border flows of capital have wider macroeconomics implications, particularly in terms of the exchange rate, which directly affects the costs involved in the movement of people as well as goods and services, and also in terms of the conduct of monetary policy and the efficiency as well as stability of the financial system.

Q13. Which of the following statements does not serve as an example of the phenomenon of “contagion” mentioned in the passage?

- ☐ a) The Chinese government decides to print new money, to the tune of a billion dollars, for circulation which would, in turn, impact the U.S. dollar rate.
- ☐ b) The UN security council, of which France is a part, decides how much shipment of arms should enter and leave France.
- ☐ c) Pakistan decides to build a chemical plant that dumps industrial waste into the Indus river, which flows into India and pollutes agricultural lands.
- ☐ d) The ongoing scientific expedition in Antarctica causes a sharp rise in temperature at the South Pole, which, in turn, affects Australia's Great Barrier Reef.

Q14. Which of the following best summarizes the concept of globalisation in the context of public policy?

- ☐ a) Globalisation refers to the movement of people, goods and services between nation-states, regulated by public policy which may curb individual freedom keeping the citizens' collective self-interest in mind.
- ☐ b) Globalisation, which involves the movement of people, goods and services between nation-states, is hindered by the authority of nation-states which restrict involvement of its citizens with citizens of other nation-states.
- ☐ c) Globalisation is the process of people, goods and services moving between one nation-state and another and causes the critical issue of the trade-off between individual freedom and collective self-interest in the context of public policy.
- ☐ d) Globalisation allows for the intermingling of goods, services and people between nation-states and is obstructed by public policy which looks for collective self-interest at the expense of individual freedom.

Q15. Future studies about which of the following will most likely NOT add further depth to the discussion in the passage?

- ☐ a) Practical methods to resolve the critical issues in the context of public policy relating to globalisation
- ☐ b) Political upheavals outside the ambit of the domestic policy of a country which impact capital movements across borders
- ☐ c) Macroeconomic implications arising from cross-border flows of capital
- ☐ d) Impact of economic integration on globalisation

Q16. In the last paragraph of the passage, the author's objective is to

- ☐ a) emphasize that the phenomenon of 'contagion' is brought forward by the special characteristics of cross-border flows of capital.
- ☐ b) highlight that cross-border flows of capital impact macroeconomic elements not directly related to capital flows.
- ☐ c) drive home the point that exchange rates directly affect the costs of globalisation and impact other macroeconomics elements.
- ☐ d) exemplify some of the macroeconomic elements outside the policy ambit of nation-states.

Q17. DIRECTIONS *for question 17:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

From the public-choice perspective, rationality is not bounded compared with a theoretical optimum; rather, rational behaviour is when a person acts to pursue his or her aims according to his or her knowledge of the situation. For example, a Native-American who believes that rain dancing produces rain and who begins to dance in a severe drought is behaving rationally. Public-choice theorists deductively develop models to explain social phenomena from a set of assumptions about individuals' aims and their information about their situations.

- ☐ a) Public-choice approach judges the rationality of individuals based on certain assumptions made about those individuals.
- ☐ b) Public-choice approach considers rationality dynamically dependent on the correlation between an individual's actions and the said individual's understanding of his or her situation.
- ☐ c) Public-choice approach judges the ability of an individual to pursue his or her goals based on rational assumptions made about the individual's situation.
- ☐ d) Public-choice approach estimates the rationality of an individual not on the basis of set parameters but on the basis of how goal-oriented the individual is in any given situation.

Q18. DIRECTIONS *for questions 18 and 19:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

- 1. Four thousand years ago, then, our forerunners in civilization did not possess what we call the idea of history.
- 2. It was because they did not possess the thing itself; history did not exist.
- 3. I think we must say that the historical consciousness of the ancient Sumerians is what scientists call an occult entity, something which the rules of scientific method forbid us to assert on the principle of Occam's Razor.
- 4. This, so far as we can see, was not because they had the thing itself but had not reflected upon it.

Q19. DIRECTIONS *for questions 18 and 19:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. Although the evolutionary importance of the Burgess Shale is universally acknowledged, there is disagreement on the mode of preservation of the fossils after burial.
2. Delicate morphological details are replicated in the elemental maps, showing that authigenic (a mineral formed where it was found) mineralization was fundamental to preserving the fossils, even though some organic remains are also present.
3. These differences reflect the compositions of the minerals that replicated the decaying organism, which were controlled by contrasts in tissue chemistry.
4. Elemental mapping demonstrates that the relative abundance of elements varies between different anatomical features of the specimens.

Q20. DIRECTIONS *for questions 20 and 21:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.
Sentence: *Since the 1970s' takeover by law and economics, antitrust law and institutions have intensified this preference for hierarchy and concentrated ownership.*

Paragraph: Competition law makes the affirmative decision to organise economic coordination primarily through traditional capitalist firms, rather than through alternative forms. _____(1)_____ These alternatives might include looser forms of producer associations that are more dispersed in ownership and more democratic in decision making. _____(2)_____ The unsurprising result is that economic coordination is increasingly accomplished through the mechanism of large, powerful firms, while economic cooperation among smaller players is increasingly disfavoured. _____(3)_____ These choices are fundamental to the policy prescriptions made by the law-and-economics approach. Again, we find ourselves with a choice that is necessarily moral and political: we can allocate coordination rights in a way that exacerbates imbalances in economic power, or in a way that ameliorates them. _____(4)_____ What we cannot do is pretend not to make the choice.

- ☐ a) Option 1
- ☐ b) Option 2
- ☐ c) Option 3
- ☐ d) Option 4

Q21. DIRECTIONS *for questions 20 and 21:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.

Sentence: *Worst of all, it imbues economic theory with unearned empirical authority.*

Paragraph: Ultimately, the problem isn't with worshipping models of the stars, but rather with uncritical worship of the language used to model them, and nowhere is this more prevalent than in economics. _____(1)_____ The economist Paul Romer at New York University has recently begun calling attention to an issue he dubs 'mathiness' – first in the paper 'Mathiness in the Theory of Economic Growth' (2015) and then in a series of blog posts. _____(2)_____ Romer believes that macroeconomics, plagued by mathiness, is failing to progress as a true science should, and compares debates among economists to those between 16th-century advocates of heliocentrism and geocentrism. _____(3)_____ Mathematics, he acknowledges, can help economists to clarify their thinking and reasoning. But the ubiquity of mathematical theory in economics also has serious downsides: it creates a high barrier to entry for those who want to participate in the professional dialogue, and makes checking someone's work excessively laborious. _____(4)_____

☐ a) Option 1

☐ b) Option 2

☐ c) Option 3

☐ d) Option 4

Q22. DIRECTIONS *for question 22:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

An important question that arises in historiography is that of the status of the notion of “global history.” One important reason for thinking globally as an historian is the fact that the history discipline – since the Greeks – has tended to be Eurocentric in its choice of topics, framing assumptions, and methods. Economic and political history, for example, often privileges the industrial revolution in England and the creation of the modern bureaucratic state in France, Britain, and Germany, as being exemplars of “modern” development in economics and politics. This has led to a tendency to look at other countries' development as non-standard or stunted. So global history is, in part, a framework within which the historian avoids privileging one regional centre as primary and others as secondary or peripheral.

- ☐ a) At the heart of the notion of global history is the idea that a good historian must not be inclined towards one or more regions neglecting others.
- ☐ b) Global history offers a framework for the historian to avoid being partial to one or more regions while ignoring the importance of others.
- ☐ c) The history of modern development has largely been Eurocentric undermining the accomplishments of countries outside that region.
- ☐ d) Historiography tries to correct the Eurocentric view of historians by bringing global history into focus.

Q23. DIRECTIONS *for question 23:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. How could drought have doomed a society that had been built on learning to take maximum advantage of limited water?
2. When colonists from the Wari state arrived in the remote Moquegua Valley in southern Peru, they built their towns on high, dry land and erected canals and aqueducts that carried water much farther than any previously attempted in the region.
3. But archaeologists studying Wari's rise and fall confront a puzzle: The state's collapse about 1000 years ago appears to have coincided with a severe drought.
4. Such innovative hydraulic engineering enabled Wari – which some scholars argue was South America's first empire – to expand and thrive for some 400 years despite an often dry, drought-prone climate.

Q24. DIRECTIONS *for question 24:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

In the social production of their existence, men inevitably enter into definite relations, which are independent of their will, namely relations of production appropriate to a given stage in the development of their material forces of production. The totality of these relations of production constitutes the economic structure of society, the real foundation, on which arises the legal and political superstructure and to which correspond definite forms of social consciousness. The mode of production of material life conditions the general process of social, political and intellectual life. It is not the consciousness of men that determines their existence, but their social existence that determines their consciousness.

- ☐ a) It is not consciousness but economics that defines the social, political and legal structures of humanity.
- ☐ b) The social, political and intellectual life of men is influenced by the material forces of production constituting the economic structure of society.
- ☐ c) The political and legal superstructures of human society are not based on their will but rather on the stage in the development of their material forces of production.
- ☐ d) Economics is the accumulation of relations of production on which the social, political and intellectual life of humans is based.
