

DIRECTIONS for questions 1 to 5: Answer the questions on the basis of the information given below.

In a movie theatre, which has exactly one screen, five movies, A through E, were screened on each day of a particular week. On each day, the five movies were screened one after the other, not necessarily in the same order, but each movie was screened exactly once on each day.

Kiran, the manager of the theatre, kept track of the number of persons who watched each movie during the week. The following chart presents the number of persons who watched each movie on the seven days of the week, from Monday to Sunday:

Q1. DIRECTIONS for question 1: Select the correct alternative from the given choices.

Considering each of the five movies, what is the maximum total number of persons who watched any movie during the week?

- ☐ a) 420
- ☐ b) 410
- ☒ c) 440 ✓ Your answer is correct
- ☐ d) 450

Q2. DIRECTIONS *for questions 2 and 3:* Type in your answer in the input box provided below the question.

Ravi, along with his friends, watched the five movies on five consecutive days, starting from Monday. All of Ravi's friends watched all the five movies along with Ravi. What is the maximum number of friends who Ravi could have watched the five movies with (not counting Ravi)?

Q3. DIRECTIONS *for questions 2 and 3:* Type in your answer in the input box provided below the question.

Ravi, along with his friends, watched the five movies on five consecutive days, starting from Wednesday. All of Ravi's friends watched all the five movies along with Ravi. What is the maximum number of friends who Ravi could have watched the five movies with?

Q4. DIRECTIONS *for questions 4 and 5:* Select the correct alternative from the given choices.

If any person who watched any movie in the theatre during the given week watched all the five movies in the theatre during the week, what is the maximum number of persons who would have watched any movie at least twice?

☐ a) 333

☐ b) 300

☐ c) 335

☐ d) 200

Q5. DIRECTIONS *for questions 4 and 5:* Select the correct alternative from the given choices.

On how many days during the given week was the number of persons who watched B greater than the number of persons who watched A and less than the number of persons who watched E?

☒ a) 0 ✓ **Your answer is correct**

☐ b) 4

☐ c) 2

☐ d) 5

In a school, there are five different classes – Class 6 through Class 10 – with each class having a distinct number of students. It is known that, for any class, say Class N, N students from that class can be distributed among the other four classes such that there are an equal number of students in all the other four classes.

The question below is followed by two statements I and II, each providing some information. Study the question and the statements and enter your answer in the input box provided below the statements as per the instructions given below:

Enter your answer as

1. if each of the two statements is independently sufficient to answer the question.
2. if statement I alone is sufficient to answer the question but statement II alone is not.
3. if statement II alone is sufficient to answer the question but statement I alone is not.
4. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.
5. if both the statements together are also not sufficient to answer the question.
6. if the question can be answered even without using either of the two statements.

Q6.

DIRECTIONS for questions 6 to 10: Type in your answer in the input box provided below the question.

Which class has the highest number of students?

- I. The number of students in Class 6 is greater than the number of students in Class 10.
- II. The number of students in Class 6 is less than the number of students in Class 10.

Q7.

DIRECTIONS *for questions 6 to 10:* Type in your answer in the input box provided below the question.

In how many classes is the number of students greater than 15?

- I. The number of students in Class 10 is a multiple of 10.

- II. The number of students in Class 6 is a multiple of 8.

Q8.

DIRECTIONS *for questions 6 to 10:* Type in your answer in the input box provided below the question.

What is the number of students in Class 9?

- I. The number of students in Class 10 is two more than the number of students in Class 8.
- II. The number of students in Class 10 is eight less than twice the number of students in Class 6.

Q9.

DIRECTIONS *for questions 6 to 10:* Type in your answer in the input box provided below the question.

Is the number of students in Class 9 greater than that in Class 8?

- I. The number of students in Class 7 is greater than the number of students in Class 10.
- II. The number of students in Class 9 is the same as the number of students in Class 7.

Q10.

DIRECTIONS *for questions 6 to 10:* Type in your answer in the input box provided below the question.

What is the difference between the number of students in Class 8 and the number of students in Class 6?

I. The number of students in Class 10 is two more than the number of students in Class 8.

II. The number of students in Class 7 is three more than the number of students in Class 8.

DIRECTIONS for questions 11 to 15: Answer the questions on the basis of the information given below.

Raghu, a school teacher, conducted five tests – Test 1 through Test 5 – in that order, for the students in his class. There are exactly five students, A through E, in his class and all the five students attempted all the five tests.

After the five tests, Raghu ranked the five students based on their performance in each test. No two students received the same rank in any test. After the five tests, he made a table, provided below, which indicates the direction of the change in the rank of a student in any test (from Test 2 through Test 5) as compared to his rank in the previous test.

In the table, a ↑ indicates a numerical increase in the rank, a ↓ indicates a numerical decrease in the rank, while ↔ indicates that the rank was unchanged.

Student	Test 2	Test 3	Test 4	Test 5
A	↑	↔	↓	↓
B	↓	↔	↓	↓
C	↓	↓	↑	↑
D	↔	↓	↑	↓
E	↓	↑	↓	↔

Q11. DIRECTIONS for questions 11 to 15: Select the correct alternative from the given choices.

Who received the fifth rank in Test 1?

- ☐ a) **B**
- ☐ b) **C**
- ☐ c) **D**
- ☐ d) **E**

Q12. DIRECTIONS *for questions 11 to 15:* Select the correct alternative from the given choices.

What is the rank of D in Test 2?

- ☐ a) 2
- ☐ b) 3
- ☐ c) 4
- ☐ d) **Cannot be determined**

Q13. DIRECTIONS *for questions 11 to 15:* Select the correct alternative from the given choices.
How many students received a numerically higher rank than E in at least four tests?

- ☐ a) 1
- ☐ b) 2
- ☐ c) 3
- ☐ d) 4

Q14. DIRECTIONS *for questions 11 to 15:* Select the correct alternative from the given choices.
What is the maximum sum of the ranks of any student across the five tests combined?

- ☐ a) **19**
- ☐ b) **18**
- ☐ c) **17**
- ☐ d) **16**

Q15. DIRECTIONS *for questions 11 to 15:* Select the correct alternative from the given choices.

Who received the second rank in Test 4?

☐ a) **A**

☐ b) **B**

☐ c) **C**

☐ d) **D**

DIRECTIONS for questions 16 to 20: Answer the questions on the basis of the information given below.

Eight persons, A through H, are standing in a line, from left to right, in that order. The eight persons have a certain number of chocolates and a certain number of biscuits with them.

Further, it is known that exactly two of the eight persons have 1 chocolate each; exactly two persons have 2 chocolates each; exactly two persons have 3 chocolates each and exactly two persons have 4 chocolates each. Also, exactly two of the eight persons have no biscuits; exactly two persons have 3 biscuits each; exactly two persons have 4 biscuits each and exactly two persons have 5 biscuits each.

It is also known that

- i. among the eight persons, there are exactly n persons standing between any two persons who have n chocolates each.
- ii. among the eight persons, there are exactly n persons standing between any two persons who have n biscuits each.
- iii. A has a lower number of chocolates than H but has a greater number of biscuits than H.

Q16. DIRECTIONS for questions 16 to 20: Select the correct alternative from the given choices.

How many chocolates does D have?

- ☐ a) 1
- ☐ b) 2
- ☐ c) 3
- ☐ d) 4

Q17. DIRECTIONS *for questions 16 to 20:* Select the correct alternative from the given choices.
Who among the following has the highest number of biscuits?

☐ a) **B**

☐ b) **D**

☐ c) **E**

☐ d) **G**

Q18. DIRECTIONS *for questions 16 to 20:* Select the correct alternative from the given choices.

For how many persons is the number of chocolates with them the same as the number of biscuits with them?

☐ a) 1

☐ b) 3

☐ c) 4

☐ d) 5

Q19. DIRECTIONS *for questions 16 to 20:* Select the correct alternative from the given choices.

What is the maximum number of biscuits with any person standing adjacent to a person with exactly 1 chocolate?

☐ a) 0

☐ b) 3

☐ c) 4

☐ d) 5

Q20. DIRECTIONS *for questions 16 to 20:* Select the correct alternative from the given choices.

The sum of the number of chocolates and the number of biscuits with any person is at least

☐ a) 1.

☐ b) 2.

☐ c) 3.

☐ d) 5.
