

DIRECTIONS for questions 1 to 4: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

The conversation about the treatment of women in the workplace has reached a crescendo of late, and senior leaders are increasingly vocal about a commitment to gender parity. That's all well and good, but there's an important catch. The discussions, and many of the initiatives, companies have undertaken, too often reflect a faulty belief: that men and women are fundamentally different, by virtue of their genes or their upbringing or both. Of course, there are biological differences. But those are not the differences people are usually talking about. Instead, the rhetoric focuses on the idea that women are inherently unlike men in terms of disposition, attitudes, and behaviours.

One set of assumed differences is marshalled to explain women's failure to achieve parity with men: Women negotiate poorly, lack confidence, are too risk-averse, or don't put in the requisite hours at work because they value family more than their careers. Simultaneously, other assumed differences – that women are more caring, cooperative, or mission-driven – are used as a rationale for companies to invest in women's success. But whether framed as a barrier or a benefit, these beliefs hold women back. We will not level the playing field so long as the bedrock on which it rests is our conviction about how the sexes are different.

The reason is simple: Science, by and large, does not actually support these claims. [While] there is wide variation among women and among men, and meta-analyses show that, on average, the genders are far more similar in their inclinations, attitudes, and skills than popular opinion would have us believe. We do see gender differences in various settings, including the workplace – but those differences are not rooted in fixed gender traits. Rather, they stem from organizational structures, company practices, and patterns of interaction that position men and women differently, creating systematically different experiences for them. When facing dissimilar circumstances, people respond differently – not because of their gender but because of their situations.

Emphasizing gender differences runs the risk of making them seem natural and inevitable. As anecdotes that align with stereotypes are told and retold, without addressing why and when stereotypical behaviours appear, gender differences are exaggerated and take on a determinative quality. Well-meaning but largely ineffectual interventions then focus on “fixing” women or accommodating them rather than on changing the circumstances that gave rise to different behaviours in the first place.

Take the common belief that women are more committed to family than men are... In a study of Harvard Business School graduates, nearly everyone, regardless of gender, placed a higher value on their families than on their work... What does differ is the treatment mothers and fathers receive when they start a family. Women (but not men) are seen as needing support, whereas men are more likely to get the message that they need to “man up” and not voice stress and fatigue. ... Mothers are often expected, indeed encouraged, to ratchet back at work. They are rerouted into less taxing roles and given less “demanding” (read: lower-status, less career-enhancing) clients.

To sum up, men's and women's desires and challenges about work/family balance are remarkably similar... Seriously investigating the context that gives rise to differential patterns in the way men and women experience the workplace – and intervening accordingly – can help companies chart a path to gender parity.

Q1. In the sentence, ‘...whether framed as a barrier or a benefit, these beliefs hold women back’, barrier and benefit can be explained as _____ AND _____ respectively.

- ☐ a) biological differences between women and men AND perceived differences between women and men
- ☐ b) assumed differences marshalled to explain women's failure to achieve parity with men AND assumed differences used as a rationale for companies to invest in women's success
- ☐ c) negotiation skills and confidence of women AND cooperative and mission-driven nature of women
- ☐ d) biological differences between women and men AND similarities in inclinations between women and men

DIRECTIONS for questions 1 to 4: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

The conversation about the treatment of women in the workplace has reached a crescendo of late, and senior leaders are increasingly vocal about a commitment to gender parity. That's all well and good, but there's an important catch. The discussions, and many of the initiatives, companies have undertaken, too often reflect a faulty belief: that men and women are fundamentally different, by virtue of their genes or their upbringing or both. Of course, there are biological differences. But those are not the differences people are usually talking about. Instead, the rhetoric focuses on the idea that women are inherently unlike men in terms of disposition, attitudes, and behaviours.

One set of assumed differences is marshalled to explain women's failure to achieve parity with men: Women negotiate poorly, lack confidence, are too risk-averse, or don't put in the requisite hours at work because they value family more than their careers. Simultaneously, other assumed differences – that women are more caring, cooperative, or mission-driven – are used as a rationale for companies to invest in women's success. But whether framed as a barrier or a benefit, these beliefs hold women back. We will not level the playing field so long as the bedrock on which it rests is our conviction about how the sexes are different.

The reason is simple: Science, by and large, does not actually support these claims. [While] there is wide variation among women and among men, and meta-analyses show that, on average, the genders are far more similar in their inclinations, attitudes, and skills than popular opinion would have us believe. We do see gender differences in various settings, including the workplace – but those differences are not rooted in fixed gender traits. Rather, they stem from organizational structures, company practices, and patterns of interaction that position men and women differently, creating systematically different experiences for them. When facing dissimilar circumstances, people respond differently – not because of their gender but because of their situations.

Emphasizing gender differences runs the risk of making them seem natural and inevitable. As anecdotes that align with stereotypes are told and retold, without addressing why and when stereotypical behaviours appear, gender differences are exaggerated and take on a determinative quality. Well-meaning but largely ineffectual interventions then focus on “fixing” women or accommodating them rather than on changing the circumstances that gave rise to different behaviours in the first place.

Take the common belief that women are more committed to family than men are... In a study of Harvard Business School graduates, nearly everyone, regardless of gender, placed a higher value on their families than on their work... What does differ is the treatment mothers and fathers receive when they start a family. Women (but not men) are seen as needing support, whereas men are more likely to get the message that they need to “man up” and not voice stress and fatigue. ... To sum up, men's and women's desires and challenges about work/family balance are remarkably similar... Seriously investigating the context that gives rise to differential patterns in the way men and women experience the workplace – and intervening accordingly – can help companies chart a path to gender parity.

Q2. Which of the following is not an example of “well-meaning but largely ineffectual interventions” as mentioned in the fourth para?

- ☐ a) A company which offers parenting leave to women employees but doesn't offer the same to male employees
- ☐ b) A company which has a strict timing policy wherein managers are encouraged to specifically bar women employees from staying back in the office beyond 8pm
- ☐ c) A company that offers free transport to women working beyond the normal office hours to ensure their safety
- ☐ d) A company which promotes male employees over women for more physically demanding roles that require long hours in the office and more travel

DIRECTIONS for questions 1 to 4: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

The conversation about the treatment of women in the workplace has reached a crescendo of late, and senior leaders are increasingly vocal about a commitment to gender parity. That's all well and good, but there's an important catch. The discussions, and many of the initiatives, companies have undertaken, too often reflect a faulty belief: that men and women are fundamentally different, by virtue of their genes or their upbringing or both. Of course, there are biological differences. But those are not the differences people are usually talking about. Instead, the rhetoric focuses on the idea that women are inherently unlike men in terms of disposition, attitudes, and behaviours.

One set of assumed differences is marshalled to explain women's failure to achieve parity with men: Women negotiate poorly, lack confidence, are too risk-averse, or don't put in the requisite hours at work because they value family more than their careers. Simultaneously, other assumed differences – that women are more caring, cooperative, or mission-driven – are used as a rationale for companies to invest in women's success. But whether framed as a barrier or a benefit, these beliefs hold women back. We will not level the playing field so long as the bedrock on which it rests is our conviction about how the sexes are different.

The reason is simple: Science, by and large, does not actually support these claims. [While] there is wide variation among women and among men, and meta-analyses show that, on average, the genders are far more similar in their inclinations, attitudes, and skills than popular opinion would have us believe. We do see gender differences in various settings, including the workplace – but those differences are not rooted in fixed gender traits. Rather, they stem from organizational structures, company practices, and patterns of interaction that position men and women differently, creating systematically different experiences for them. When facing dissimilar circumstances, people respond differently – not because of their gender but because of their situations.

Emphasizing gender differences runs the risk of making them seem natural and inevitable. As anecdotes that align with stereotypes are told and retold, without addressing why and when stereotypical behaviours appear, gender differences are exaggerated and take on a determinative quality. Well-meaning but largely ineffectual interventions then focus on “fixing” women or accommodating them rather than on changing the circumstances that gave rise to different behaviours in the first place.

Take the common belief that women are more committed to family than men are... In a study of Harvard Business School graduates, nearly everyone, regardless of gender, placed a higher value on their families than on their work... What does differ is the treatment mothers and fathers receive when they start a family. Women (but not men) are seen as needing support, whereas men are more likely to get the message that they need to “man up” and not voice stress and fatigue. ... Mothers are often expected, indeed encouraged, to ratchet back at work. They are rerouted into less taxing roles and given less “demanding” (read: lower-status, less career-enhancing) clients.

To sum up, men's and women's desires and challenges about work/family balance are remarkably similar... Seriously investigating the context that gives rise to differential patterns in the way men and women experience the workplace – and intervening accordingly – can help companies chart a path to gender parity.

Q3. The study of Harvard Business School graduates cited in the penultimate para of the passage serves as evidence for the argument that:

- ☐ a) Gender stereotypes are not backed by statistical evidence.
- ☐ b) Women pay for preferential treatment at work through slower career advancement.
- ☐ c) Women are more committed to their families than men are.
- ☐ d) Women and men face different challenges at the workplace.

DIRECTIONS for questions 1 to 4: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

The conversation about the treatment of women in the workplace has reached a crescendo of late, and senior leaders are increasingly vocal about a commitment to gender parity. That's all well and good, but there's an important catch. The discussions, and many of the initiatives, companies have undertaken, too often reflect a faulty belief: that men and women are fundamentally different, by virtue of their genes or their upbringing or both. Of course, there are biological differences. But those are not the differences people are usually talking about. Instead, the rhetoric focuses on the idea that women are inherently unlike men in terms of disposition, attitudes, and behaviours.

One set of assumed differences is marshalled to explain women's failure to achieve parity with men: Women negotiate poorly, lack confidence, are too risk-averse, or don't put in the requisite hours at work because they value family more than their careers. Simultaneously, other assumed differences – that women are more caring, cooperative, or mission-driven – are used as a rationale for companies to invest in women's success. But whether framed as a barrier or a benefit, these beliefs hold women back. We will not level the playing field so long as the bedrock on which it rests is our conviction about how the sexes are different.

The reason is simple: Science, by and large, does not actually support these claims. [While] there is wide variation among women and among men, and meta-analyses show that, on average, the genders are far more similar in their inclinations, attitudes, and skills than popular opinion would have us believe. We do see gender differences in various settings, including the workplace – but those differences are not rooted in fixed gender traits. Rather, they stem from organizational structures, company practices, and patterns of interaction that position men and women differently, creating systematically different experiences for them. When facing dissimilar circumstances, people respond differently – not because of their gender but because of their situations.

Emphasizing gender differences runs the risk of making them seem natural and inevitable. As anecdotes that align with stereotypes are told and retold, without addressing why and when stereotypical behaviours appear, gender differences are exaggerated and take on a determinative quality. Well-meaning but largely ineffectual interventions then focus on “fixing” women or accommodating them rather than on changing the circumstances that gave rise to different behaviours in the first place.

Take the common belief that women are more committed to family than men are... In a study of Harvard Business School graduates, nearly everyone, regardless of gender, placed a higher value on their families than on their work... What does differ is the treatment mothers and fathers receive when they start a family. Women (but not men) are seen as needing support, whereas men are more likely to get the message that they need to “man up” and not voice stress and fatigue. ... To sum up, men's and women's desires and challenges about work/family balance are remarkably similar... Seriously investigating the context that gives rise to differential patterns in the way men and women experience the workplace – and intervening accordingly – can help companies chart a path to gender parity.

Q4. The author is most likely to commission which of the following studies to help companies ‘chart a path to gender parity’?

- ☐ a) A study that analyses the career advancement of women after childbirth
- ☐ b) A study that analyses the diversity at various levels of management hierarchy
- ☐ c) A study that analyses the policies a company follows to address issues raised by various employees
- ☐ d) A study that analyses the differences in the nature of work delegated to male and female employees of equal competence and enthusiasm

DIRECTIONS for questions 5 to 8: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

It is sometimes said that the work of music is not what is written down on paper: the score is merely a set of directions that enables one to find or realize the work. This claim, however, leads to an absurd misunderstanding of the way the music works. What we hear, the realization of the score in sound, can never be identified with the work itself because there are many different ways of realizing the score, but they are all realizations of the same work, which in fact remains invariant...

It is not sensible to claim that for every score there is an ideal realization. The relation between score and realization implies that various possibilities remain open... The written score sets limits within which many possibilities can find a home. The critical problem remains essentially how to decide which of the many interpretations realize the work and which ones betray it... Determining what is legitimate and what is illicit is not as straightforward or as easy as we think. In fact, the most deplorable misrepresentations of a work can often come from those who believe themselves to be the legal guardians of the tradition...

The survival of the Western musical past is due in part to the creation of an efficient system of notation. For the past 250 years, the transmission of the musical tradition has depended on the fact that in Europe, and to some extent in America [...] learning to read music, to sing, and to play an instrument was a proof of cultural literacy, an aid to social mobility and to rising in the world...

We think today of music as something public – performed in concerts or sold to the public in the form of recordings. In the nineteenth and early twentieth centuries, the experience of music was altogether different. Most music was heard at home, and was completely private; some of the experience was semiprivate, music played at parties or after dinner by invited professional and amateur musicians. Even symphonies were not solely a part of the public realm... Just as most members of the audience today at a play by Shakespeare have read some of his works in school, so a good part of the audience at a symphony concert seventy-five years ago had received their first knowledge of an important part of the symphonic repertoire at home.

This private and semiprivate experience of music did more than increase one's familiarity with the repertoire. It altered the understanding of music... Learning to play a Beethoven sonata as a part of one's education and then hearing a concert pianist perform it in public showed how personal the interpretation of a score could be... Merely the fact of displacing a work from the private to the public sphere altered its significance.

Our assumption today, made unconsciously, that almost all music is basically public, is a radical distortion of Western tradition... If the audience for classical music is not growing fast enough to make the art richly profitable, the reason is not that there is a diminished response to the art of serious music but that there are fewer children who learn to play the piano. Learning music from records instead of playing it has radically altered our perception of the art.

Q5. Which of the following statements will weaken the 'assumption' mentioned in the last para of the passage ('Our assumption today...')?

- ☐ a) A majority of the parents ensure that their children learn to play music from the score.
- ☐ b) Music departments in universities do not get the funding that science or even humanities departments receive.
- ☐ c) The affluent classes pay musicians sumptuous amounts of money to perform at their family gatherings.
- ☐ d) There are numerous opportunities even for amateur musicians and children to perform in public these days.

DIRECTIONS for questions 5 to 8: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

It is sometimes said that the work of music is not what is written down on paper: the score is merely a set of directions that enables one to find or realize the work. Learning music from records instead of playing it has radically altered our perception of the art.

Q6. 'Learning to play a Beethoven sonata as a part of one's education and then hearing a concert pianist perform it in public' would help an individual

- ☐ a) understand the shortcomings of their own art.
- ☐ b) comprehend the influence of musicians' personalities on the realisations of their art.
- ☐ c) observe how music played in private and music played in public differ from each other.
- ☐ d) identify that one's own reflections mould their realisation of a particular piece of musical work.

DIRECTIONS for questions 5 to 8: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

It is sometimes said that the work of music is not what is written down on paper: the score is merely a set of directions that enables one to find or realize the work. The written score sets limits within which many possibilities can find a home. The critical problem remains essentially how to decide which of the many interpretations realize the work and which ones betray it... Determining what is legitimate and what is illicit is not as straightforward or as easy as we think. In fact, the most deplorable misrepresentations of a work can often come from those who believe themselves to be the legal guardians of the tradition...

The survival of the Western musical past is due in part to the creation of an efficient system of notation. For the past 250 years, the transmission of the musical tradition has depended on the fact that in Europe, and to some extent in America [...] learning to read music, to sing, and to play an instrument was a proof of cultural literacy, an aid to social mobility and to rising in the world...

We think today of music as something public – performed in concerts or sold to the public in the form of recordings. In the nineteenth and early twentieth centuries, the experience of music was altogether different. Most music was heard at home, and was completely private; some of the experience was semiprivate, music played at parties or after dinner by invited professional and amateur musicians. Even symphonies were not solely a part of the public realm... Just as most members of the audience today at a play by Shakespeare have read some of his works in school, so a good part of the audience at a symphony concert seventy-five years ago had received their first knowledge of an important part of the symphonic repertoire at home.

This private and semiprivate experience of music did more than increase one's familiarity with the repertoire. It altered the understanding of music... Learning to play a Beethoven sonata as a part of one's education and then hearing a concert pianist perform it in public showed how personal the interpretation of a score could be... Merely the fact of displacing a work from the private to the public sphere altered its significance.

Our assumption today, made unconsciously, that almost all music is basically public, is a radical distortion of Western tradition... If the audience for classical music is not growing fast enough to make the art richly profitable, the reason is not that there is a diminished response to the art of serious music but that there are fewer children who learn to play the piano. Learning music from records instead of playing it has radically altered our perception of the art.

Q8. Which of the following practices would the author eschew in order to reverse our current perception of the art?

- ☐ a) Ensure that learning to play music from score is a part of the curriculum at schools and colleges
- ☐ b) Indulge children through symphony concerts instead of lessons that teach them to play music from notations
- ☐ c) Incentivise families to increase their familiarity with the art of serious music at a private level
- ☐ d) Enhance the level of acclimatisation children have with notations of symphony repertoires

DIRECTIONS for questions 9 to 12: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Episodic memory is the ability to recall past events that one has the sense of having personally experienced. Unlike semantic memory, which involves recalling simple facts like “bee-stings hurt,” episodic memory involves putting yourself at the heart of the memory; like remembering the time you swatted at a bee with a rolled-up newspaper and it got angry and stung your hand.

If an animal can imagine itself interacting with the world in the past via episodic memory it stands to reason that the animal might also be able to imagine itself in the future in a similar scenario, and thus plan its behaviour... The ability to represent oneself and one’s actions in the mind’s eye – both in the past and in the future – is what scientists refer to as mental time travel.

Evidence from both brain-damaged and healthy humans suggests that two forms of mental time travel, retrospective in the case of episodic memory and prospective in the case of future planning, depend on common neuropsychological processes.

Previous studies have shown that, in accord with the Bischof-Kohler hypothesis, rats and pigeons may solve tasks by encoding the future, but only over very short time scales. Although some primates and corvids take actions now that are based on their future consequences, these have not been shown to be selected with reference to future motivational states, or without extensive reinforcement of the anticipatory act. However, research suggests that western scrub-jays can spontaneously plan for tomorrow without reference to their current motivational state, thereby challenging the idea that this is a uniquely human ability.

These birds store and recover food caches in the wild; experimental studies have shown that their ability to recover their caches depends on an episodic-like memory for the caching episode. Specifically, jays remember what food they have cached, where and when it was cached, and which other birds observed their caching. These memories are then used flexibly, both to guide their recovery of the food caches and to protect their food caches against being stolen by other birds. To the extent that episodic memory and future planning depend on common processes, the caching behaviour of these birds should reflect an ability to anticipate future need states...

But there is longstanding opposition to the idea of suggesting that animals are capable of mental time travel. The University of Queensland psychologist Thomas Suddendorf argues that despite “ingenious attempts to demonstrate episodic memory or future simulation in non-human animals,” it still seems that “there are few signs that animals act with the flexible foresight that is so characteristic of humans.” While animals like scrub-jays might be able to adapt their behavior to make the most of their food-caching, they do not display similar flexibility outside of this narrow domain. Unlike scrub-jays, “humans,” states Suddendorf, “can simulate virtually any event and evaluate it in terms of likelihood and desirability”.

Q9. Which of the following examples best demonstrates the difference between episodic and semantic memory?

- ☒ a) **The knowledge of alphabets is semantic memory, whereas the memory of how a language was learnt is episodic memory.** ✓ Your answer is correct
- ☐ b) The recall of the names of actors acting in a movie is episodic memory, whereas the memory of watching the movie with one’s friends is semantic memory.
- ☐ c) The memory of how a delicacy tasted the last time one consumed it is semantic memory, whereas the memory of how a delicacy was cooked is episodic memory.
- ☐ d) The knowledge of the rules of a sport is semantic memory, whereas the knowledge of who won a game one watched live is episodic memory.

DIRECTIONS *for questions 9 to 12:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Episodic memory is the ability to recall past events that one has the sense of having personally experienced. Unlike semantic memory, which involves recalling simple facts like “bee-stings hurt,” episodic memory involves putting yourself at the heart of the memory; like remembering the time you swatted at a bee with a rolled-up newspaper and it got angry and stung your hand.

If an animal can imagine itself interacting with the world in the past via episodic memory it stands to reason that the animal might also be able to imagine itself in the future in a similar scenario, and thus plan its behaviour... These birds store and recover food caches in the wild; experimental studies have shown that their ability to recover their caches depends on an episodic-like memory for the caching episode. Specifically, jays remember what food they have cached, where and when it was cached, and which other birds observed their caching. These memories are then used flexibly, both to guide their recovery of the food caches and to protect their food caches against being stolen by other birds. To the extent that episodic memory and future planning depend on common processes, the caching behaviour of these birds should reflect an ability to anticipate future need states...

But there is longstanding opposition to the idea of suggesting that animals are capable of mental time travel. The University of Queensland psychologist Thomas Suddendorf argues that despite “ingenious attempts to demonstrate episodic memory or future simulation in non-human animals,” it still seems that “there are few signs that animals act with the flexible foresight that is so characteristic of humans.” While animals like scrub-jays might be able to adapt their behavior to make the most of their food-caching, they do not display similar flexibility outside of this narrow domain. Unlike scrub-jays, “humans,” states Suddendorf, “can simulate virtually any event and evaluate it in terms of likelihood and desirability”.

Q10. The author mentions wester scrub-jays to elucidate the point that

- ☐ a) they can plan their future behaviour based on their past experience.
- ☐ b) spontaneous planning for the future while being dissociated from the present is not an exclusive human ability.
- ☐ c) they are capable of spontaneous planning through extensive reinforcement of the anticipatory act.
- ☒ d) the ability to plan without being motivated to do so is not exclusive to humans alone. ✖ Your answer is incorrect

DIRECTIONS for questions 9 to 12: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Episodic memory is the ability to recall past events that one has the sense of having personally experienced. Unlike semantic memory, which involves recalling simple facts like “bee-stings hurt,” episodic memory involves putting yourself at the heart of the memory; like remembering the time you swatted at a bee with a rolled-up newspaper and it got angry and stung your hand.

If an animal can imagine itself interacting with the world in the past via episodic memory it stands to reason that the animal might also be able to imagine itself in the future in a similar scenario, and thus plan its behaviour... The ability to represent oneself and one’s actions in the mind’s eye – both in the past and in the future – is what scientists refer to as mental time travel.

Evidence from both brain-damaged and healthy humans suggests that two forms of mental time travel, retrospective in the case of episodic memory and prospective in the case of future planning, depend on common neuropsychological processes.

Previous studies have shown that, in accord with the Bischof-Kohler hypothesis, rats and pigeons may solve tasks by encoding the future, but only over very short time scales. Although some primates and corvids take actions now that are based on their future consequences, these have not been shown to be selected with reference to future motivational states, or without extensive reinforcement of the anticipatory act. However, research suggests that western scrub-jays can spontaneously plan for tomorrow without reference to their current motivational state, thereby challenging the idea that this is a uniquely human ability.

These birds store and recover food caches in the wild; experimental studies have shown that their ability to recover their caches depends on an episodic-like memory for the caching episode. Specifically, jays remember what food they have cached, where and when it was cached, and which other birds observed their caching. These memories are then used flexibly, both to guide their recovery of the food caches and to protect their food caches against being stolen by other birds. To the extent that episodic memory and future planning depend on common processes, the caching behaviour of these birds should reflect an ability to anticipate future need states...

But there is longstanding opposition to the idea of suggesting that animals are capable of mental time travel. The University of Queensland psychologist Thomas Suddendorf argues that despite “ingenious attempts to demonstrate episodic memory or future simulation in non-human animals,” it still seems that “there are few signs that animals act with the flexible foresight that is so characteristic of humans.” While animals like scrub-jays might be able to adapt their behavior to make the most of their food-caching, they do not display similar flexibility outside of this narrow domain. Unlike scrub-jays, “humans,” states Suddendorf, “can simulate virtually any event and evaluate it in terms of likelihood and desirability”.

Q11. Thomas Suddendorf’s argument in the last para is dependent on the assumption that

- ☐ a) **planning its future behaviour requires an animal to possess the ability for mental time travel.**
- ☐ b) a certain level of ingenuity is required to demonstrate episodic memory or future simulation.
- ☐ c) the ability to use foresight in their actions is restricted to humans alone.
- ☐ d) **flexibility in behaviour should be demonstrated in more than a narrow range of activities to prove the ability of mental time travel.**

DIRECTIONS for questions 9 to 12: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Episodic memory is the ability to recall past events that one has the sense of having personally experienced. Unlike semantic memory, which involves recalling simple facts like “bee-stings hurt,” episodic memory involves putting yourself at the heart of the memory; like remembering the time you swatted at a bee with a rolled-up newspaper and it got angry and stung your hand.

If an animal can imagine itself interacting with the world in the past via episodic memory it stands to reason that the animal might also be able to imagine itself in the future in a similar scenario, and thus plan its behaviour... The ability to represent oneself and one’s actions in the mind’s eye – both in the past and in the future – is what scientists refer to as mental time travel.

Evidence from both brain-damaged and healthy humans suggests that two forms of mental time travel, retrospective in the case of episodic memory and prospective in the case of future planning, depend on common neuropsychological processes.

Previous studies have shown that, in accord with the Bischof-Kohler hypothesis, rats and pigeons may solve tasks by encoding the future, but only over very short time scales. Although some primates and corvids take actions now that are based on their future consequences, these have not been shown to be selected with reference to future motivational states, or without extensive reinforcement of the anticipatory act. These birds store and recover food caches in the wild; experimental studies have shown that their ability to recover their caches depends on an episodic-like memory for the caching episode. Specifically, jays remember what food they have cached, where and when it was cached, and which other birds observed their caching. These memories are then used flexibly, both to guide their recovery of the food caches and to protect their food caches against being stolen by other birds. To the extent that episodic memory and future planning depend on common processes, the caching behaviour of these birds should reflect an ability to anticipate future need states...

But there is longstanding opposition to the idea of suggesting that animals are capable of mental time travel. The University of Queensland psychologist Thomas Suddendorf argues that despite “ingenious attempts to demonstrate episodic memory or future simulation in non-human animals,” it still seems that “there are few signs that animals act with the flexible foresight that is so characteristic of humans.” While animals like scrub-jays might be able to adapt their behavior to make the most of their food-caching, they do not display similar flexibility outside of this narrow domain. Unlike scrub-jays, “humans,” states Suddendorf, “can simulate virtually any event and evaluate it in terms of likelihood and desirability”.

Q12. From the last sentence of the penultimate para, the author implies that

- ☐ a) the episodic memory of jays helps them remember where, when and how food was cached.
- ☒ b) caching of food by jays indicates that they may also anticipate the need for it in the future. ✓ Your answer is correct
- ☐ c) jays cached food without anticipating that other birds might try to steal it.
- ☐ d) episodic memory alone will not help jays cache food.

DIRECTIONS for questions 13 to 16: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Ghettos refer to sections of cities populated by minority ethnic or religious groups, that is, neighbourhoods in which the minority is a majority. Some argue that their roots can be traced to Roman persecutions of Jews. During the Middle Ages in Europe, ghettos consisted of Jewish quarters in overwhelmingly Christian cities (e.g., the famous Warsaw Ghetto). Venice had a Jewish ghetto by the 14th century. Jews were forbidden from owning land outside the ghetto, and Jewish ghettos often had walls around them and were the subjects of vicious pogroms.

The nature of ghettos has changed over time. As Jewish ghettos were gradually disbanded during the 19th century, the term 'ghetto' came to refer to other ethnic minorities such as Indian, Bangladeshi, and Jamaican immigrants to British cities. Although most ghettos tended to have below-average income levels, they were defined primarily in terms of ethnicity, not class.

The reasons for the formation of ghettos involve a combination of external constraints and internal motivations. External constraints include economic and political discrimination against the minority population, including formal or informal prohibitions against employment and the purchase of housing. Internal motivations that help underpin ghetto formation include the desire to be near one's ethnic group and language, the availability of marriage partners, access to culturally specific foods, and the informal webs of mutual assistance common among some ethnic groups...

Often the cultural assimilation of one group over several generations and its dispersal into other predominant [...] communities, which varied from group to group, led to the group's replacement by another, less assimilated ethnicity. Thus, although the ethnic division of labour that underscores ghettos may be temporary so far as any individual group is concerned, it tends to be a permanent part of the urban landscape.

The arrival of Chinese immigrants generated the first Chinatowns in New York and many West Coast cities. The migration of African Americans to northern cities circa World War I led to the formation of black ghettos, many of which were middle-class communities. Some ghettos (e.g., Harlem) became the centre of rich artistic and political movements. The growth of the Latino or Hispanic population has generated the formation of Spanish-speaking barrios in cities such as Los Angeles... In many large cities that are the destination of migrant streams from around the world, it is not unusual to see ethnic communities of Armenians, Koreans, Thais, and Vietnamese, among others.

The transformation of American cities after World War II, particularly suburbanization and deindustrialization, changed the nature of American ghettos decisively. The intersections of class and race increasingly rendered minority-dominant neighbourhoods poor with high levels of unemployment and crime. Increasingly, the term 'ghetto' came to be associated with the black urban underclass and more generally with poverty, leading to the popular equation of ghettos with slums. However, some use the term to refer to gay or artistic enclaves in contemporary cities. In short, ghettos reveal the intersecting dynamics of ethnicity, the urban division of labour, and residential segregation as they affect different groups under different historical circumstances.

Q13. Which of the following cannot be inferred as a reason behind ghettoization?

- ☐ a) **Ghettos represent a sense of affinity between members of ethnic groups who bond on the basis of food, marriage, and culture.**
- ☐ b) **Ghettos attract members of ethnic groups who cannot find a job or purchase a house because of economic and political favouritism.**
- ☐ c) Ghettos represent people of underprivileged social classes which have been ostracized politically by communities of privileged classes.
- ☒ d) **Ghettos are built up through the accumulation of migrants from one country or ethnicity in certain pockets of large cities.** ✖ Your answer is incorrect

DIRECTIONS for questions 13 to 16: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Ghettos refer to sections of cities populated by minority ethnic or religious groups, that is, neighbourhoods in which the minority is a majority. Some argue that their roots can be traced to Roman persecutions of Jews. During the Middle Ages in Europe, ghettos consisted of Jewish quarters in overwhelmingly Christian cities (e.g., the famous Warsaw Ghetto). Venice had a Jewish ghetto by the 14th century. However, some use the term to refer to gay or artistic enclaves in contemporary cities. In short, ghettos reveal the intersecting dynamics of ethnicity, the urban division of labour, and residential segregation as they affect different groups under different historical circumstances.

Q14. Suburbanization and deindustrialization of American cities led to the change in the nature of American ghettos

- ☒ a) by shaping them into economic underbellies rather than ethnic congregations. ✓ Your answer is correct
- ☐ b) by turning them into criminal hotbeds.
- ☐ c) because of the way they attracted artists.
- ☐ d) due to the concentration of African Americans affected by unemployment.

DIRECTIONS for questions 13 to 16: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

Ghettos refer to sections of cities populated by minority ethnic or religious groups, that is, neighbourhoods in which the minority is a majority. Thus, although the ethnic division of labour that underscores ghettos may be temporary so far as any individual group is concerned, it tends to be a permanent part of the urban landscape.

The arrival of Chinese immigrants generated the first Chinatowns in New York and many West Coast cities. The migration of African Americans to northern cities circa World War I led to the formation of black ghettos, many of which were middle-class communities. Some ghettos (e.g., Harlem) became the centre of rich artistic and political movements. The growth of the Latino or Hispanic population has generated the formation of Spanish-speaking barrios in cities such as Los Angeles... In many large cities that are the destination of migrant streams from around the world, it is not unusual to see ethnic communities of Armenians, Koreans, Thais, and Vietnamese, among others.

The transformation of American cities after World War II, particularly suburbanization and deindustrialization, changed the nature of American ghettos decisively. The intersections of class and race increasingly rendered minority-dominant neighbourhoods poor with high levels of unemployment and crime. Increasingly, the term 'ghetto' came to be associated with the black urban underclass and more generally with poverty, leading to the popular equation of ghettos with slums. However, some use the term to refer to gay or artistic enclaves in contemporary cities. In short, ghettos reveal the intersecting dynamics of ethnicity, the urban division of labour, and residential segregation as they affect different groups under different historical circumstances.

Q15. It can be inferred from the fourth para of the passage ('Often the cultural assimilation... urban landscape') that

- ☐ a) ghettos in urban areas are never permanent.
- ☐ b) ghettos attract ethnic immigrants turned away by predominant communities.
- ☒ c) ghettos eventually disseminate into the larger communities in an urban landscape. **✗ Your answer is incorrect**
- ☐ d) ghettos represent a flux of ethnic minorities that may blend into the mainstream communities.

Q16. If a government wants to get rid of all the ghettos (taken in the post-World War II sense) in a particular city, which of the following methods, according to the passage, will be effective in achieving the purpose?

- I. Stop illegal immigrants from streaming into the city
- II. Create jobs for the unemployed people in the city across all communities
- III. Provide vocational training for poor members of minority ethnic groups
- IV. Facilitate cultural blending and mainstream integration of communities in the city

- ☐ a) I, II, III and IV
- ☐ b) I and IV
- ☐ c) II and III
- ☒ d) II, III, and IV ✓ **Your answer is correct**

Q17. DIRECTIONS *for question 17:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

- 1. She is also an activist who understands and will stand up for the oppressed, whether people, giants or Hippogriffs, and who campaigns for an end to the enslavement of elves.
- 2. It turns out that Hermione is an ideal candidate for racebending – changing the race or ethnicity of a character routinely portrayed as white – and has long been reconstructed as black, biracial or Asian online, particularly in fan art.
- 3. Because in a series that is as much about the evils of racial supremacy as anything else, Hermione is in a ‘Muggle-born’ minority and is often the target of racial abuse.
- 4. She is female, clever, strong, good, attractive, loyal, not necessarily white, and now, for the first time, black – and all at the same time.

Q18. DIRECTIONS *for question 18:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.

Sentence: *It embodies the pillars of Christianity as much as the Islamic Golden Age, the Enlightenment or the New Deal.*

Paragraph: In preindustrial societies, cooperation represented naked necessity for survival. Yet the realisation that a healthy whole is larger than its parts never stopped informing cultures. ____ (1) ____ In the midst of a global depression, the US president Franklin D Roosevelt evoked an ‘industrial covenant’ – a commitment to living wages and a right to work for all. ____ (2) ____ During the 1960s, Martin Luther King, Jr gave voice to the broader idea when he said that no one is free until we are all free. ____ (3) ____ On Earth Day 1970, the US senator Edmund Muskie proclaimed that the only society to survive is one that ‘will not tolerate slums for some and decent houses for others, ... clean air for some and filth for others’. ____ (4) ____ We should call these ideas what they are – central civilisational insights. Social and economic prosperity depends on the wellbeing of all, not just the few.

☒ a) **Option 1**  **Your answer is correct**

☐ b) **Option 2**

☐ c) **Option 3**

☐ d) **Option 4**

Q19. DIRECTIONS *for question 19:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. Dogs, but not wolves, harbor the levator anguli oculi medialis muscle, which is responsible for raising the inner eyebrow.
2. As dogs became domesticated thousands of years ago and began to form bonds with humans, both their anatomy and behavior developed as a result of selection for favorable traits.
3. This allows dogs to produce eyebrow movements that are more frequent and expressive than those of wolves, in turn giving dogs an evolutionary advantage with humans, who instinctively respond more positively.
4. There is an evolutionary explanation for how “puppy dog eyes” came to be, by comparing the facial muscles of dogs with their closest living relatives, wolves.

Q20. DIRECTIONS *for question 20:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Breaking Bad's aesthetic progression toward more overt dynamism is to some extent a reflection of the show's increasing confidence in itself, likely aided by the fact that cinematographer Reynaldo Villalobos helms six of the initial run's seven episodes. However, it's also a fundamental articulation of the protagonist, Walt's own transformation from someone straddling a line between the everyday and the extreme, to a man more fully aware of, and comfortable embracing, his darker, radical impulses. That shift is felt most forcefully in the season's canniest recurring image: Walt seen from a low, upturned camera angle. It's a vantage point that casts the character in an imposing, larger-than-life light.

- ☒ a) **Breaking Bad** witnesses an aesthetic evolution of its dynamic style which portrays the growing confidence of its cinematographer, and of its main character in his choices. **✗ Your answer is incorrect**
- ☐ b) **Breaking Bad** grows aesthetically and dynamically to articulate the transformation of its protagonist and its own self-assurance.
- ☐ c) The cinematographer of **Breaking Bad** enhances the flamboyance of the show in the process of portraying its main character's growing confidence in himself.
- ☐ d) The transmogrification of **Breaking Bad's** main character into someone darker is felt forcefully in the gradual shift in its cinematographic flair.

Q21. DIRECTIONS *for question 21:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. The ground for China's opening to America was prepared by a rupture in its relations with the Soviet Union in 1960.
2. Without America to keep its neighbourhood secure and underpin open markets, China could not have reaped such gains from the market-led reforms it launched in the late 1970s.
3. For over four decades it has been an unambiguous beneficiary of the American order.
4. Lacking the American allies' access to Western markets, management and technology, China threw itself open to foreign investment – a remarkably pragmatic surrender of economic sovereignty.

Q22. DIRECTIONS *for question 22:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.

Sentence: *As long as the liberal order is organised through global and regional institutions that have no direct links to voting populations, it will be mediated through networks of nation-states.*

Paragraph: Opponents of the liberal order have substantive grievances. Rapid, ungoverned flows of capital and labour destabilise their lives. The nation-state cannot take back control of the flows, and radical democracy provides only an illusion of control. ____ (1) ____ To truly govern the flows, the liberal order itself must be made directly responsible to the people whose lives it affects. ____ (2) ____ As economic integration increases, those nation-states lose the ability to meaningfully represent their populations in the order's institutions. The more economic power the liberal order has, the more vestigial the nation-states become. ____ (3) ____ The nation-states attempt to obscure this reality with nationalism and radical democratic reforms, and in doing so they enable themselves and the order to go on, but at a cost of completely stripping the public of any meaningful say. ____ (4) ____ The nation-state continues, but only as a shell of itself, unable to represent anything. The liberal order continues, but with no legitimacy, at best surviving by pitting individuals and groups against each other in local fights with no practical stakes.

- ☐ a) **Option 1**
- ☐ b) **Option 2**
- ☐ c) **Option 3**
- ☐ d) **Option 4**

Q23. DIRECTIONS *for questions 23 and 24:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

The term public service is old-fashioned, but still useful. A public service is an activity whose purpose is to meet the needs of its customers, but in which these needs cannot appropriately be met by the ordinary process of profit-making firms operating in a competitive market. Perhaps because competition is impossible, as in electricity transmission and distribution. Perhaps because the service is intrinsically uneconomic, as with the railways. Perhaps because there is a strong social interest in the nature and quality of the output, as in education or water supply. Or perhaps because crude commercial motivations are incompatible with the ethos that customers expect from the service, as in health.

- ☐ a) In services like electricity transmission and distribution, railways, water supply, etc., it is imperative that commercial motivations are put aside to meet the needs of the customers.
- ☐ b) Public service involves activities of social welfare which need to be placed above calculating, profit-oriented business.
- ☒ c) Public service is a way of meeting the essential needs of customers, where the scope for profit-making and commercial orientations is limited. **✗ Your answer is incorrect**
- ☐ d) Public service meets those essential needs of customers which cannot be addressed through profit-making motives.

Q24. DIRECTIONS *for questions 23 and 24:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

What political theory can hope to contribute is a small number of relatively simple analytical thoughts that may prove helpful in the unending and necessarily exhausting attempt to comprehend both in theory and practice the task of handling the economics, politics, and social, biological (and even physical and chemical) relations of an increasingly globalized human habitat. A handful of such thoughts can be divided for convenience into points about values, points about history, and points about the intrinsic difficulties of understanding politics. In their ensemble they can be seen as bearing directly on the issue of how to understand the concept of prudence for a modern population.

- ☐ a) **Political theory, by encompassing considerations of history, values, and politics, has helped in comprehending various aspects of the modern human population.**
- ☐ b) **Globalisation of the human habitat allows political theory to play a vital role in defining the role played by history, politics and values in such a society.**
- ☐ c) **Political theory helps us analyse the economics, politics, society, and biology of the globalized human habitat.**
- ☐ d) **Political theory could be helpful in understanding, through a perspective in politics, values, and history, the arduous task of dealing with various aspects of the globalised modern population.**
