

DIRECTIONS *for questions 1 to 4:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

At the close of the Middle Ages one of the main tasks of European thought was to bring about a fresh reorientation of historical studies. The great theological and philosophical systems which had provided a basis for determining the general plan of history a priori had ceased to command assent, and with the Renaissance a return was made to a humanistic view of history based on that of the ancients. Accurate scholarship became important, because human actions were no longer felt to be dwarfed into insignificance in comparison with a divine plan.

Historical thought once more placed man in the centre of its picture. But in spite of the new interest in Greco-Roman thought, the Renaissance conception of man was profoundly different from the Greco-Roman; and when a writer like Machiavelli, in the early sixteenth century, expressed his ideas about history in the shape of a commentary on the first ten books of Livy he was not reinstating Livy's own view of history. Man, for the Renaissance historian, was not man as depicted by ancient philosophy, controlling his actions and creating his destiny by the work of his intellect, but man as depicted by Christian thought, a creature of passion and impulse. History thus became the history of human passions, regarded as necessary manifestations of human nature.

The positive fruits of this new movement were found first of all in a great clearing away of what had been fanciful and ill-founded medieval historiography. By the beginning of the seventeenth century Bacon was able to sum up the situation by dividing his map of knowledge into the three great realms of poetry, history, and philosophy, ruled over by the three faculties of imagination, memory, and understanding. To say that memory presides over history is to say that the essential work of history is to recall and record the past in its actual facts as they actually happened.

But the position of history as thus defined was precarious. It had a definite programme, the rediscovery of the past, but it had no methods or principles by which this programme could be carried out. Actually, Bacon's definition of history as the realm of memory was wrong, because the past only requires historical investigation so far as it is not and cannot be remembered. If it could be remembered, there would be no need of historians. Bacon's own contemporary Camden was already at work in the best Renaissance tradition on the topography and archaeology of Britain, showing how unremembered history could be reconstructed from data somewhat as, at the same time, natural scientists were using data as the basis of scientific theories. The question how the historian's understanding works to supplement the deficiencies of his memory was a question that Bacon never asked.

Q1. 'Man as depicted by Christian thought' was different from 'man as depicted in the ancient philosophy' because

- ☐ a) the former placed the divine at the centre of historical thought, whereas the latter placed humans at the centre of historical thought.
- ☐ b) the former placed importance on human passions whereas the latter placed importance on human intellect.
- ☐ c) the former was defined according to the Renaissance conception whereas the latter, according to the Greco-Roman conception.
- ☐ d) the former viewed history as a consequence of passion whereas the latter viewed it as a consequence of intellect.

Q2. It can be inferred from the first para of the passage that

- ☐ a) the a priori determination of the general outline of history based on theological systems advocated a divine plan.
- ☐ b) accurate scholarship allowed historians to proscribe the importance of human actions.
- ☐ c) Renaissance ideas depicted the path of human ascension rather than divine supremacy.
- ☐ d) theological systems distorted the actual history of events.

Q3. Bacon's idea of history is invalidated by the author's argument that

- ☐ a) history is not just what our memory serves up but also that which our memory doesn't retrieve.
- ☐ b) history is the association of human interpretation with the human memory of events as they actually happened.
- ☐ c) history is critical only because of the deficiencies of human memory.
- ☐ d) history's primary function is not to record or recall the past as it actually happened.

Q4. The author mentions Camden's example in the last para of the passage to build on the hypothesis that

- ☐ a) Bacon's contemporaries didn't agree with his idea of history.
- ☐ b) history can be rebuilt without memory.
- ☐ c) the purpose of historical investigation is to reconstruct what cannot be remembered.
- ☐ d) a historian's understanding supplements the deficiencies of memory.

DIRECTIONS for questions 5 to 8: The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

According to general opinion the concept of the *Kunstwollen* or “art drive” stands at the center of Riegl’s thought. What is the origin of this concept?

Its starting point is the recognition of “style,” which took place during the course of the nineteenth century. If one classes them according to their purely external appearance, the diverse works of art can be divided up into differing groups and subgroups of varying size. In general, these groups of artworks form relatively closed spatial and temporal unities. They gather around certain central works which represent the “pure style.” ...

This concept of style as something grasped intuitively and described through highlighting individual stylistic characteristics is by its very nature extremely erratic and uncertain. “The purely empirical depiction of styles by their individual characteristics is not scientific, in the proper sense of the word. It stops with merely outward description.”

The phenomenon that has been observed is therefore the following. Forms are transformed, their “external character,” their style changes, now the simple question is raised as to what drives this formal change. What is changing at a fundamental level, when the surface style changes? One can thus also phrase the second question as follows: We know the dependent variable factor, namely the style of works of art; what is the variable independent of all others? These two questions are not of equal importance; most immediately we shall give prominence to the second.

Various answers have been given to this question. One answer, or, more precisely, one *apparent* answer, that of [Semperians], is that purpose, material, and techniques change, and that these are the determinants of style. There is an intellectual factor in addition which can be ignored (and this is a mistake) because it is secondary. If one then asks further what these three variables depend on, one comes to the result that since blind chance is not admitted the independent variable is the material culture: crass materialism! There is no need at all to develop this point of view through to its final consequences. For it is clear that according to this answer, style means something quite different from what it meant in our question, and that our question only has the appearance of having been answered... In terms of our concept of style, forms that have been executed with different materials and techniques and for different purposes can remain unchanged. This solution is thus useless for us.

Riegl himself offered an opposing answer. The independent variable is the “direction of the *Kunstwollen*” to use the rough general expression. The purpose, the material and the technique also change, but they are negative factors, mere “frictional coefficients,” which have to be subtracted in order to recognize the pure “direction of the art drive” that is the positive determining factor. In any case, two of them are partly dependent on the direction of the art drive, which also determine the choice of material and technique.

Here we have arrived at the concept and theory of the art drive on the basis of questions raised by the concrete praxis of scholarly research. The concept is introduced to clarify the quite concrete phenomenon of style. The theory of the art drive is a “new explanation of style.”

Q5. Why does the author call Semperians’ answer as an “*apparent* answer” in the fifth paragraph of the passage?

- ☒ a) **The Semperians’ answer erroneously assumes that style can remain unchanged with changes in purpose, material and technique.** ✖ Your answer is incorrect
- ☐ b) The author believes that the Semperians are mistaken in not considering intellectual factor as a determinant of style.
- ☐ c) The Semperians do not consider the influence of *Kunstwollen* on style in answering the author’s question.
- ☐ d) The concept of style according to the Semperians is different from that according to the author.

Q6. According to the Riegl, which of the following is true regarding the relation between 'art drive' and 'purpose, material and technique'?

- ☒ a) **Material and technique partly determine the direction of the art drive, which in turn determines the purpose.**
- ☐ b) The changes in purpose, material and technique indicate the direction of the art drive.
- ☐ c) The changes in purpose, material and technique interfere when trying to understand the direction of the art drive.
- ☐ d) The direction of art drive determines the changes in purpose, material and technique.

Q7. Which of the following will Reigl most probably agree with regarding *Kunstwollen*?

- ☐ a) **The direction of the *Kunstwollen* changes whenever there is a change in the style of art.**
- ☐ b) The direction of the *Kunstwollen* is independent of the styles of art.
- ☐ c) The direction of the *Kunstwollen* helps in identifying variations in an artistic form across temporal and spatial planes.
- ☐ d) The direction of the *Kunstwollen* explains why the changes in style are highly erratic and uncertain.

Q8. Which of the following can be inferred from the third paragraph of the passage?

- ☐ a) **Defining concept of style in a scientific manner will result in an erratic and uncertain definition of the concept of style.**
- ☐ b) The concept of style should be defined independent of any external descriptions.
- ☐ c) Direction of art drive should be used for defining the concept of style.
- ☐ d) Defining the concept of style only through its visible manifestations will not be comprehensive.

DIRECTIONS *for questions 9 to 12:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

The diversity discourse is primarily aimed at managers, particularly those sceptical about 'equal opportunities', which is defined as a state of fairness in which job applicants are treated similarly, unhampered by artificial barriers or prejudices or preferences, with the intent that the important jobs in an organization should go to the people who are most qualified – persons most likely to perform ably in a given task – and not go to persons for reasons deemed arbitrary or irrelevant, such as circumstances of birth, upbringing, having well-connected relatives or friends, religion, sex, ethnicity, race, caste, or involuntary personal attributes such as disability, age, gender identity, or sexual orientation. It tends to encourage managers to take 'ownership' of diversity with the result that its particular meaning is derived from a managerial agenda.

Diversity is not owned by ordinary employees and their representatives; indeed, this is often deemed by diversity proponents to be one of its strengths over traditional equal opportunity approaches because it supposedly depoliticizes the issues. In effect this is a fallacy because the issues remain political. Control of policies and practices has always resided with management, but diversity extends this to cover the discourse of equality.

A good illustration comes from Zanoni and Janssens (2004) who found that managers they interviewed resorted to stereotypes to explain differences and were interested only in how such differences could be deployed in relation to organizational goals. In some cases, differences were interpreted by managers as deficiencies (of skills, competences, dispositions, attitudes and so forth) and therefore provided a managerial rationale for not appointing, promoting, rewarding, and so on. In other instances, the differences were interpreted as vulnerabilities and consequently such employees were considered to be more compliant and malleable to managerial demands. Zanoni and Janssens conclude that 'diversity is conceived in a very selective and instrumental way with reference to the productive process in the specific organizational context. In this way, these diversity discourses clearly reflect existing power relations between management and employees in the organization.'

A retail case study by Foster and Harris (2005) is just as instructive in revealing the paradox in enacting diversity. Line managers struggle to come to terms with the apparent contradiction in treating everyone the same (for consistency and perceived equity) while also recognizing the individual needs of employees, which might require differential treatment. Indeed, the sameness–difference paradox evident in the policy and practice of previous equal opportunities approaches is not reconciled by the turn to diversity.

Overall, within the workplace, diversity approaches might encourage a rethinking of policy and a review of practices from which ethnic minority employees might benefit. It is, however, misguided to believe that diversity will deliver in ways that equal opportunities could not. Diversity discourses are not constructed to confront power relations, dominant ideologies or organizational goals. They do not tackle the deep, structural problems discussed by other commentators. Indeed, as these commentators have noted there is a tendency for the diversity discourse to be underpinned by a business case rationale which is dangerously flawed.

Q9. Which of the following best represents the sameness-difference paradox?

- ☐ a) **Diversity and the practice of equal opportunities approaches are counterintuitive.**
- ☒ b) **Individual needs of employees, who should be treated equally, demand differential treatment.** ✓ **Your answer is correct**
- ☐ c) Diversity discourses only reflect existing power relations between management and employees in the organization.
- ☐ d) Diversity approaches benefit ethnic minority employees more than they do others.

Q10. Which of the following is not a shortcoming of the diversity approach, as understood from the passage?

- ☐ a) **Deep-rooted structural issues that put ethnic minorities at a disadvantage in organisations are still not addressed.**
- ☐ b) **The diversity argument doesn't upend the existing counterproductive organisational ideologies.**
- ☐ c) The diversity discourse makes management the final voice on policies and practices.
- ☐ d) Managers tasked with implementing the diversity approach could reinforce stereotypes.

Q11. The author's central concern in the passage is alleviated by which of the following statements?

- ☐ a) **Diversity discourses, albeit through imperfect implementation, could lay the foundation for a change in mindset that addresses deep-rooted issues at organisational level.**
- ☐ b) **Diversity discourses are well-intentioned and can benefit ethnic minorities, even if the benefits don't happen at an expected scale.**
- ☐ c) Diversity discourses shift away from the equal opportunities approach that focuses on a narrow definition of workplace value of an employee.
- ☐ d) Diversity discourses make managers responsible for addressing the needs of their employees from ethnic minorities.

Q12. Zanoni and Janssens illustration of how managers treated the diversity discourse elucidates that

- ☐ a) **a business rationale behind diversity doesn't address structural issues in an organisation.**
- ☐ b) **differences between employees often agreed with pre-existing stereotypes in the organisation.**
- ☐ c) the definition of diversity as employed at an organisational level is quite myopic.
- ☐ d) individual differences could be exploited for organisational benefit if managers are in-charge of the diversity discourse.

DIRECTIONS *for questions 13 to 16:* The passage given below is accompanied by a set of **four** questions. Choose the best answer to each question.

There are few things that have more changed our world than has science. Scientists and their discoveries have helped transform material conditions and opened up new social and moral vistas. Yet it is the very notion of human-directed change that many people today find so troubling. No period has been more penetrated by science, nor more dependent upon it, than the past half century. Yet no period has been more uneasy about it, nor felt more that the relationship with scientific knowledge is a Faustian pact. ...

No science has seemed more to call all in doubt than the science of biology. From genetic engineering to cloning, from test tube babies to xenotransplantation, from the mapping of the human genome to the possibility of ending the menopause, biology has truly disturbed our universe. Opinion formers in society worry that man is now playing God, remaking nature in his own image. Bryan Appleyard is terrified by the way that science has invaded the human realm. "The new biology entails the thwarting of nature at a very fundamental level. Genetics must be contained, humbled."

But while there is immense fear about the practical consequences of biological sciences, there is an equally immense support for biological theories of human nature. ...

This contrast between hostility to biological experimentation and embrace of evolutionary psychology should not surprise us. What many people fear is a science that disturbs their moral compass, upsetting traditional ideas of Man and nature, a science that promises new forms of control over nature, new types of mastery over human destiny. What many people are drawn to is a science that provides science and comfort, and turns an explanation about the human condition into a parable about fate.

The common threads in hostility to biological science and a yearning for evolutionary stories are a debased view of what it means to be human and an exalted view of nature. 'In a secular civilization', Mary Douglas and Aaron Wildavsky observe, 'nature plays the role of general arbiter of human designs more plausibly than God'...Today, nature is rapidly turning into a new deity to whom we turn for moral answer and personal comfort... In an age in which humans and human activity are held in low esteem, there is a tendency to deify nature. In almost every aspect of life, the 'natural' is regarded as morally superior to the artificial or the human...As Norman Levitt put it 'The "natural" is the virtuous opposite of the degraded manifestations of humanity's fallen state.'

The deification of nature has led many both to decry science that seems to defile the purity of nature and to laud science that seems to make us more natural. Biological technology that threatens to transform our relationship with nature is often seen as unnatural and blasphemous. 'Have we the right', the molecular biologist Ervin Chargaff asks, 'to counteract, irreversibly, the evolutionary wisdom of millions of years? Each generation must be allowed to struggle with human nature as it is given to them, and not with the irreversible biological results of their forbears' actions.

Q13. Why do we feel that our relationship with science is a Faustian pact?

- ☒ a) **Over the past 50 years, we have come to depend on science more and more.** ✖ Your answer is incorrect
- ☐ b) **While science has given us immense power, it has disturbed our moral compass.**
- ☐ c) Science penetrates every aspect of our life calling accepted facts into question.
- ☐ d) Scientific theories have continuously revolutionized the way we look at Nature.

Q14. In the passage, the author

- ☐ a) **examines the implications of scientific progress for man and nature.**
- ☐ b) **justifies the need to examine scientific discoveries under the microscope of reality.**
- ☐ c) voices society's concern over scientists playing God.
- ☐ d) presents the society's view of science as a double-edged sword.

Q15. According to the author, what kind of science is not feared by people?

- ☐ a) **Science that realigns their moral compass.**
- ☐ b) **Science that upsets traditional ideas of man and nature.**
- ☐ c) Science that attributes the condition of humanity to destiny.
- ☐ d) Science that results in new types of mastery over human destiny and nature.

Q15. According to the author, what kind of science is not feared by people?

- ☐ a) **Science that realigns their moral compass.**
- ☐ b) **Science that upsets traditional ideas of man and nature.**
- ☐ c) Science that attributes the condition of humanity to destiny.
- ☐ d) Science that results in new types of mastery over human destiny and nature.

Q16. Which of the following can be inferred to be definitely false from a reading of the passage?

- ☐ a) **According to Aaron Wildavsky, we turn to nature as a new deity because it provides us with a compass for our behaviour.**
- ☐ b) **Ervin Chargaff asserts that new generations must struggle with the irreversible biological results of their predecessors.**
- ☐ c) Norman Levitt viewed “the natural” as the contradiction of a human extreme.
- ☐ d) Bryan Appleyard believes that fields like genetics and molecular biology upset the apple cart of nature's principles.

Q17. DIRECTIONS *for question 17:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. The consensus reached is that that region was plagued by a particularly virulent strain of what sociologists call a “culture of honour.”

2. When lots of families fight with one another in identical little towns up and down the same mountain range, it’s a pattern.

3. When one family fights with another, it’s a feud.

4. What was the cause of the Appalachian pattern?

Q17. DIRECTIONS *for question 17:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. The consensus reached is that that region was plagued by a particularly virulent strain of what sociologists call a “culture of honour.”

2. When lots of families fight with one another in identical little towns up and down the same mountain range, it’s a pattern.

3. When one family fights with another, it’s a feud.

4. What was the cause of the Appalachian pattern?

Q18. DIRECTIONS *for question 18:* Four alternative summaries are given below the text. Choose the option that best captures the essence of the text.

Almost all first-rate translators convey the story and spirit of the works at hand — capturing Bovary’s yearning or Raskolnikov’s torment. But then we remember Flaubert, who famously labored to find *le seul mot juste* (‘the one right word’). Even a cursory glance of competing translations displays thousands of differing word choices, many of which alter the rhythm, the syntax and, to varying degrees, the meaning of the work. To take one telling example, here is Lyngstad’s translation of the third sentence from Hamsun’s novel, “Victoria”: “When he grew up he wanted to be a maker of matches.” But this is how an earlier translator, Oliver Stallybrass, rendered it: “When he grew up he would work in a match factory.” I cannot say which version is truer, but the differences are plain. Lyngstad gives us an ambitious boy determined to set the world on fire. Stallybrass introduces us to a child whose grim fate seems predetermined.

- ☐ a) **While good translators can do their job very well, it is difficult to convey the same impression that the original work would have.**
- ☐ b) **A work in translation can never hope to convey the same impression as its original. Even a superficial reading of a translation shows it is inferior to the original work.**
- ☐ c) A translation can express only the gist of the original story, but not the nuances of language accompanying it.
- ☐ d) Translators play a central role in our experience of foreign works. While second-rate translators are usually handicapped by certain limitations, a few of the best or first-rate translators can overcome them.

Q19. DIRECTIONS *for question 19:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.
Sentence: *She might also have no sense of the opportunity costs involved, and not appreciate that time caring for this relative will take away precious time doing something else that is both valuable and enjoyable.*

Paragraph: A child who volunteers to care for a relative with dementia for a couple of hours a day can't authoritatively endorse such a project if she finds it stressful. ____ (1) ____ Unlike the writer or the doctor who can step back to evaluate how stressful projects fit with her overall conception of a good life, and then authoritatively endorse them, a child's evaluative capacities are not sufficiently mature and developed for her to do the same. ____ (2) ____ She is therefore unable to assess such caring obligations against a background of adequate self-knowledge, realistic sense of competing options, sufficient level of moral knowledge, and adequate understanding of the costs, risks and opportunities involved. ____ (3) ____ That's why she might end up, say, giving unreasonable weight to pleasing her family, or making a mistake about what morality requires. ____ (4) ____ Such mistakes are not avoidable but a direct result of the kind of creature a child is – a creature who is not yet in a position to go ahead with stressful and anxiety-inducing projects because she is able to produce authoritative reasons in their favour.

- ☐ a) **Option 1**
- ☐ b) **Option 2**
- ☐ c) Option 3
- ☐ d) Option 4

Q20. DIRECTIONS *for question 20:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and write the sequence of four numbers as your answer, in the input box given below the question.

- 1. Gerald Horne’s *Jazz and Justice: Racism and the Political Economy of the Music* examines the economic, social, and political forces that shaped this music into a phenomenal U.S. – and Black American – contribution to music and culture.
- 2. Jazz musicians battled organized crime, the Ku Klux Klan, and other variously malignant forces dominating the nightclub scene where jazz became known.
- 3. The music we call “jazz” arose in late nineteenth century North America – most likely in New Orleans – based on the musical traditions of Africans, newly freed from slavery.
- 4. Grounded in the music known as the “blues,” which expressed the pain, sufferings, and hopes of Black folk, this new music entered the world via the instruments that had been abandoned by departing military bands at the end of World War.

Q21. DIRECTIONS *for question 21:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

“The language of Europe is translation,” wrote Umberto Eco, an Italian author. The European Union is proud of its everyday multilingualism, which becomes more fluent and accessible with every year as the use of machine translation tools grows. Yet, the adoption of English as a common language should be seen not as a challenge but as a complement to this tradition. Europe is about diversity, and its patchwork of languages and dialects must be promoted and protected. But it is also about the sort of unity that is possible only with a common tongue, even imperfectly spoken. Universalising English while upholding the EU’s native languages would be not a betrayal of the cosmopolitan European ideal, but its affirmation.

- ☐ a) **In order to live up to its cosmopolitan ideal, the EU must adopt English as a common language.**
- ☐ b) **The cosmopolitan ideal of European Union will not be undermined, but rather, be reaffirmed by making English the common tongue.**
- ☐ c) If Europe has to achieve unity in its diversity, it has to adopt English as a common tongue, despite its plethora of native languages.
- ☐ d) While machine translation tools have aided the EU’s multilingualism, universalising English will take it one step further by complementing the bevy of native languages.

Q22. DIRECTIONS *for question 22:* The sentences given in the question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a number. Decide on the proper order for the four sentences and key in the sequence of four numbers as your answer, in the input box given below the question.

1. These delusions also involve the misinterpretation of perceptions or experiences.
2. The main feature of this disorder is the presence of delusions, unshakable beliefs in something untrue or not based on reality.
3. Delusional disorder, previously called paranoid disorder, is a type of serious mental illness called a "psychosis" in which a person cannot tell what is real from what is imagined.
4. These delusions mainly involve situations that could occur in real life, such as being followed, poisoned, deceived, conspired against, or loved from a distance.

Q23. DIRECTIONS *for question 23:* There is a sentence that is missing in the paragraph below. Look at the paragraph and decide in which blank (option 1, 2, 3, or 4) the following sentence would best fit.

Sentence: *The history of science shows that major scientific revolutions typically occur without such incentives – think of Nicolaus Copernicus, Isaac Newton, Charles Darwin and Albert Einstein.*

Paragraph: _____(1)_____ A policy-level change, for which some now argue, is to reduce or eliminate the intellectual property protection of medical interventions. This would have several consequences. It would, obviously, mitigate the financial incentives that appear to be corrupting medical science. It would probably also mean that new drugs would be cheaper. _____(2)_____ Certainly, the antics of people such as Martin Shkreli (who raised the price of the life-saving drug Daraprim, used by people with suppressed immune systems, from \$13.50 per pill to \$750) would be impossible. Would it also mean that there would be less innovative medical research and development? This is a tired argument often raised to defend intellectual property laws. However, it has serious problems. _____(3)_____ Breakthroughs in medicine are no different. _____(4)_____ The most important breakthroughs in medical interventions – antibiotics, insulin, the polio vaccine – were developed in social and financial contexts that were completely unlike the context of pharmaceutical profit today. Those breakthroughs were indeed radically effective, unlike most of the blockbusters today.

- ☐ a) **Option 1**
- ☐ b) **Option 2**
- ☐ c) Option 3
- ☐ d) Option 4

Q24. DIRECTIONS *for question 24:* The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

When we think about education and equality, we tend to think first about distributive questions – for example, how to design a system that will offer the real possibility of equal educational attainment, if not achievement, to all students. The vocational approach imagines that this equal attainment will translate into a wider distribution of skills, which will reduce income inequality. The civic conception of education suggests a very different way to understand the link between education and equality. This understanding begins with the recognition that fair economic outcomes are aided by a robust democratic process and, therefore, by genuine political equality. Thus, an education focused not merely on technical skills, but also on what I call participatory readiness, provides a distinct and better way to promote equality through schooling.

- ☐ a) **While income inequality may be resolved through a vocational approach to education, political equality can only be attained through the wider understanding of democratic process.**
- ☐ b) **While a vocational solution advocates equal educational attainment to reduce income inequality, it isn't as effective as enhancing the political awareness of citizens.**
- ☐ c) Focusing merely on technical skills of individuals will not be enough to reduce inequality as individuals should also be trained, more importantly, for participation in democratic processes.
- ☐ d) Education can promote equality only when we shift from the vocational approach focused on income inequality to also acknowledge the importance of political equality.
